

Activity A:**Caterpillar-resistant corn**Get the Gizmo ready:

- Click **Reset** (↺) and check that **Task 1** is selected in the dropdown menu.

Introduction: Lepidoptera sp. larvae (caterpillars) eat corn kernels, leaves, and stalks. In this activity, use genetic engineering techniques to create a corn plant that is resistant to caterpillars.

Question: How can we produce corn that is resistant to Lepidoptera sp. larvae?

1. **Observe:** Click **Play**. Select one of the strains of bacteria harmful to larvae (by clicking on the plate).

Which strain did you select? _____

2 and 4 additional strains were too severely impacted and perished.

2. **Investigate:** Click **Continue**. The screen now shows the **genome**, or set of genes, of the selected bacteria. One of these genes produces the protein that kills the caterpillars. You will test each gene by adding it to the genome of a bacteria that does not kill caterpillars. This process is called **transformation**.

Drag three genes into the Petri dishes at lower right. These genes are now inserted into the genomes of the sensitive bacteria in the plates. Press **Play**. If none of those genes help to kill the caterpillars, click **Reset** and try three other genes. When you find a gene that kills the caterpillars, click on the Petri dish to select the gene that confers resistance.

Which gene did you select? _____

Gene F

In reality, finding a gene with a desired trait is much less common. Scientists search through many more bacterial strains and potential genes to find the traits they are looking for.

3. **Observe:** Click **Continue**. **Promoters** are regions of DNA that initiate the **transcription** of a gene. Some promoters only work in specific types of cells, such as leaf cells or root cells.

To determine which cells of a corn plant a promoter works in, four promoters have been attached to the **Green Fluorescent Protein** (GFP) gene. Each promoter-GFP gene has been inserted into a corn plant. Select **Lights off** to see the parts of each plant glow green and fill in the table below.

Promoter	Glowing plant part(s)	Promoter	Glowing plant part(s)
1	Roots and leaves	3	Roots
2	leaves	4	leaves

Which promoter is active in only the leaves?

1 and 3

In the whole plant?

Innovation, Dual Use, and Security Jonathan B. Tucker, 2012-03-30 A framework for assessing the security risks of emerging dual use technologies and devising tailored governance strategies is proposed and applied to contemporary case studies Recent advances in disciplines such as biotechnology nanotechnology and neuropharmacology entail a dual use dilemma because they promise benefits for human health and welfare yet pose the risk of misuse for hostile purposes The emerging field of synthetic genomics for example can produce custom DNA molecules for life saving drugs but also makes possible the creation of deadly viral agents for biological warfare or terrorism The challenge for policymakers is to prevent the misuse of these new technologies without forgoing their benefits Innovation Dual Use and Security offers a systematic approach for managing the dual use dilemma The book presents a decision framework for assessing the security risks of emerging technologies and fashioning governance strategies to manage those risks This framework is applied to fourteen contemporary case studies including synthetic genomics DNA shuffling and directed evolution combinatorial chemistry protein engineering immunological modulation and aerosol vaccines The book also draws useful lessons from two historical cases the development of the V series nerve agents in Britain and the use and misuse of LSD by the U S Army and the CIA Innovation Dual Use and Security offers a

The Basis of Life, 2004 All living things are made up of cells and contain genetic information

Science and Environmental Decision Making Mark Huxham, David Sumner, 2000 Science is vital in informing the increasingly urgent and complex environmental decisions that affect all our lives from international agreements on action to limit climate change to decisions on growing genetically modified crops It is clear however that many environmental decisions are taken in the face of scientific uncertainty or ignorance and involve questions of politics and ethics that go beyond science Science alone cannot answers such questions as Are the risks of nuclear power acceptable and Why should we conserve wild species Science and Environmental Decision Making explores the use and limitations of science in helping to answer environmental questions emphasising the importance of ethics politics and sociology in the decision making process Starting with the question What is meant by a scientific explanation the first three chapters provide a simple introduction to the philosophy and sociology of science and the importance of these fields to environmental scientists They explain the logic of testing ideas in science and look at some of the absolute limits of scientific explanation showing how value judgements inevitably influence scientific work before exploring commercial and political influences on science Chapters 4 10 show how these themes are relevant in case studies ranging from genetic engineering in agriculture to conservation marine eutrophication and the use of models and radiation protection Each chapter is written by a researcher active in the area and begins with an editorial introduction highlighting the major themes illustrated by the case study This book is aimed at students of ecology environmental science environmental management and geography It will also be useful reading for sociology students who study how the science is applied
