most authoritative and comprehensive assessment of the networked readiness of national economies araund the world The Report has since expanded its coverage this year to 102 countries The Report which captures new insights and best serve as a tollo for policymakers and business leaders The overall goal of the Reports is to establish a process whereby key stakeholders con evaluate progress on a continual basis   Digitalized Co-production of Emergency Response Wael Alkusaibati,2024-05-03 Contemporary global challenges like global warming rapid urban development and the current unstable security situation lead to an increase in large scale crises e g forest fires alongside frequent smaller emergencies e g house fires and traffic accidents The increase in emergencies strains professional response organizations necessitating additional resources Civilian volunteers are therefore increasingly being integrated into the response system The development is mediated by information and communication technologies ICTs which enable communication between professional responders e g the municipal rescue services the emergency medical services the Public Swedish Answering Point and citizens While many studies focus on spontaneous volunteer activities emerging on social media fewer examine organized volunteerism initiatives at the local emergency response level Over a decade ago a municipal rescue service in northern Sweden established an initiative recruiting volunteers as first responders and equipping them with basic response tools The volunteers undergo training in tasks such as cardiopulmonary resuscitation CPR and fire extinguishing They are dispatched to predefined response tasks using simple ICT applications like SMS lists or mobile apps This initiative has expanded to other areas due to perceived benefits such as shorter response times and reduced casualties and material damage The phenomenon can be labelled as an emerging form of ICT enabled or digitalized co production of public services However previous research indicates a research gap in understanding describing and defining this type of co production The overall aim of the thesis is to describe how these ICT enabled initiatives emerge and develop over time and identify the related effects on the response system This is expected to provide recommendations on how they can be developed and supported This aim is divided into three specific objectives where each has been addressed through a research paper 1 identifying how the existing literature describes ICT enabled digitalized volunteerism in large and small scale emergencies 2 identifying how these initiatives emerge and operate and can be maintained in small scale emergencies introducing more systematized knowledge on this concept 3 initially evaluating the contributions of volunteers in the initiatives Leaning on a case study approach inspired by action research a combination of data collection methods has been adopted e g a literature review interviews and incident reports filled out by volunteers For the data analysis the theoretical lens of ICT enabled digitalized co production of public services has been applied The first paper is a literature review study that examines digitally enabled volunteering activities in crises and small scale emergencies It highlights the prevalence of studies on volunteers using social media for crowdsourcing in crises often termed digitalized volunteerism which entails virtual and or physical contributions by volunteers to the response efforts In contrast fewer studies focus on volunteers role in local small

scale emergencies labelled as hybrid ICT enabled or digitalized coproduction The term hybrid here refers to the loose affiliation of the volunteers where they collaborate with the rescue services but are not officially associated through binding contracts Hence they are in between spontaneous and organized volunteerism Both volunteering modes support professional response systems and display similar needs for steering financial support coordination and integration of ICT artifacts However crises require increased coordination to manage uncertainties risks and data overload effectively The second paper presents three models describing the emergence of hybrid digitalized co production initiatives in urban and rural areas as defined in Paper 1 along with how national authorities can support them These models i e Rural Urban and National consist of three phases Recruitment Response and Maintenance Each model exhibits distinct characteristics In rural areas for example there is a need for more regular training due to low alerting frequency and the possibility of using simple dispatch ICTs as cost effective solutions Conversely urban areas have more alerts necessitating more advanced ICTs with less emphasis on regular training compared to rural areas At the macro level the national model highlights roles that national actors can play such as facilitating a joint Application Programming Interface API joint insurance solutions and an ICT system that can register incoming and active volunteers The third paper is an initial evaluation of these initiatives at emergency sites focusing on ICT enabled dispatch estimated response times tasks performed and collaboration with professionals to assess the effects of using volunteers This approach contrasts with previous studies that took an overall perspective and only used qualitative data A total of 53 incident reports were collected from volunteers revealing that volunteers arrived before professionals in twothirds of incidents contributing to an average gain of 5 minutes Additionally volunteers performed a broader range of tasks than previously described and often continued collaboration with professionals on site despite the initial expectation of handing over tasks upon the arrival of professional response actors Also comparing this data with the rural model from Paper 2 similarities and differences emerged For instance there was a higher number of alerts and the basic ICTs used for dispatch were deemed insufficient contrary to the model s perception The thesis scientific contribution is a clearer conception of digitalized co production of above all local emergency response as an emerging phenomenon In the three papers the ICT dispatch was identified as central and needs further development to enhance this co production form The thesis also sheds light on the need to integrate the initiatives into the official governmental frameworks Furthermore the thesis provides a primary understanding of how the concept works on the ground and provides an initial evaluation of the effects In the practical field the thesis offers insights into the importance of volunteers as additional resources to the official response systems highlights challenges hindrances and enablers and suggests potential solutions and improvements Future work will include a further collection of incident reports for more reliable assessments and complementary interviews with volunteers Also the potential role of volunteers in larger crises for example as part of civil preparedness will be further explored Samh llsutmaningar s som klimatf r ndring och det nuvarande globala s kerhetsl get leder till en kning av
