✓ Exclusively available on IvyPanda

### Audit Case Study: Introduction

Auditing is the process of examining the financial statements of an organization, correcting errors, and eliminating possible cases of fraud. The auditing process is a core activity that enables a company to control its internal activities in an efficient manner. Through auditing, most companies are able to achieve their business goals and objectives (Wang & Tuttle 2009).

Several critics have risen concerning the auditing process. While some businesspersons find it worthwhile to invest in the auditing exercise, some find the auditing exercise unworthy.

In this case, we have the XYZ Ltd Company; a pharmaceutical manufacturing company that was formed because of the splitting of the parent company, ABC Ltd. XYZ Ltd is the smaller of the two newly formed companies and the previous sales manager of the parent company is the Managing Director.

The managing director does not find it worthwhile for the small company to carry out yearend audits. According to him, yearend auditing is an unnecessary exercise that will only increase the expenses of the company without necessarily adding value to the business.

This paper will give a stringent analysis of the newly formed XYZ Company and determine if indeed there is a need to carry out yearend auditing. The paper will also give a detailed discussion of the pros and cons of appointing the same auditors of the parent company to audit XYZ Ltd.

Lastly the paper will give an overview of the audit rotation exercise, its advantages and disadvantages. From the discussions, the paper will give decisive conclusions and recommendations that would enable the XYZ Company's managers to make a worthwhile decision concerning the auditing process.
