Theory and Applications of CT Imaging and Analysis Noriyasu Homma, 2011-04-04 The x ray computed tomography CT is well known as a useful imaging method and thus CT images have continually been used for many applications especially in medical fields This book discloses recent advances and new ideas in theories and applications for CT imaging and its analysis The 16 chapters selected in this book cover not only the major topics of CT imaging and analysis in medical fields but also some advanced applications for forensic and industrial purposes These chapters propose state of the art approaches and cutting edge research results **Medical Image Recognition, Segmentation and Parsing** S. Kevin Zhou, 2015-12-11

This book describes the technical problems and solutions for automatically recognizing and parsing a medical image into multiple objects structures or anatomies It gives all the key methods including state of the art approaches based on machine learning for recognizing or detecting parsing or segmenting a cohort of anatomical structures from a medical image Written by top experts in Medical Imaging this book is ideal for university researchers and industry practitioners in medical imaging who want a complete reference on key methods algorithms and applications in medical image recognition segmentation and parsing of multiple objects Learn Research challenges and problems in medical image recognition segmentation and parsing of multiple objects Methods and theories for medical image recognition segmentation and parsing of multiple objects Efficient and effective machine learning solutions based on big datasets Selected applications of medical image parsing using proven algorithms Provides a comprehensive overview of state of the art research on medical image recognition segmentation and parsing of multiple objects Presents efficient and effective approaches based on machine learning paradigms to leverage the anatomical context in the medical images best exemplified by large datasets Includes algorithms for recognizing and parsing of known anatomies for practical applications *Radiomics and artificial intelligence in radiology and nuclear medicine* Giorgio Treglia, Salvatore Annunziata, 2023-06-14

Landmarking and Segmentation of 3D CT Images Shantanu Banik, Rangaraj Rangayyan, Graham Boag, 2022-06-01 Segmentation and landmarking of computed tomographic CT images of pediatric patients are important and useful in computer aided diagnosis CAD treatment planning and objective analysis of normal as well as pathological regions Identification and segmentation of organs and tissues in the presence of tumors are difficult Automatic segmentation of the primary tumor mass in neuroblastoma could facilitate reproducible and objective analysis of the tumor s tissue composition shape and size However due to the heterogeneous tissue composition of the neuroblastic tumor ranging from low attenuation necrosis to high attenuation calcification segmentation of the tumor mass is a challenging problem In this context methods are described in this book for identification and segmentation of several abdominal and thoracic landmarks to assist in the segmentation of neuroblastic tumors in pediatric CT images Methods to identify and segment automatically the peripheral artifacts and tissues the rib structure the vertebral column the spinal canal the diaphragm and the pelvic surface are described Techniques are also presented to

evaluate quantitatively the results of segmentation of the vertebral column the spinal canal the diaphragm and the pelvic girdle by comparing with the results of independent manual segmentation performed by a radiologist The use of the landmarks and removal of several tissues and organs are shown to assist in limiting the scope of the tumor segmentation process to the abdomen to lead to the reduction of the false positive error and to improve the result of segmentation of neuroblastic tumors Table of Contents Introduction to Medical Image Analysis Image Segmentation Experimental Design and Database Ribs Vertebral Column and Spinal Canal Delineation of the Diaphragm Delineation of the Pelvic Girdle Application of Landmarking Concluding Remarks

Image-guided Radiation Therapy Arno J. Mundt, John C. Roeske, 2010-12-31 Image Guided Radiation Therapy IGRT is a true revolution in the field of radiation oncology IGRT provides the unprecedented means of conforming dose to the shape of the target tissues in 3 dimensions reducing the risk of complications thereby improving the quality of life of irradiated patients Moreover IGRT provides the means to deliver higher than conventional doses thus improving the chance of cure in these patients Despite its established benefits several barriers exist to the widespread clinical implementation of IGRT In the past great concerns existed regarding the large capital outlay needed for both software and hardware This barrier is less relevant today given the increased reimbursements possible with IGRT Today the most significant barrier is education IGRT is a fundamentally new approach to both treatment planning and delivery

Adoption of the IGRT approach entails new ways of thinking in regard to patient selection treatment planning and quality assurance measures Unfortunately apart from a few University based short courses limited resources are available for the physician and physicist interested in learning IGRT

Novel Methods for Oncologic Imaging Analysis: Radiomics, Machine Learning, and Artificial Intelligence Xuelei Ma, Lei Deng, Rong Tian, Chunxiao Guo, 2021-09-23 Artificial Intelligence and Imaging for Oncology Poonam Yadav, Zhimin Li, Yuxiang Zhou, 2025-02-18 Recent progress in artificial intelligence AI and advanced imaging techniques have brought about exciting diagnostic and therapeutic opportunities in oncology More and more state of the art CT PET and MRI imaging techniques are being applied to tumor imaging and new interdisciplinary field such as MR LINAC is booming We feel there is an urgent need to organize a Research Topic to highlight the application of AI and imaging for various oncology branches

such as radiation therapy as we are witnessing an accelerated integration of imaging and therapy to improve the care of cancer patients Imaging has also been the backbone of the oncology world It is used for diagnosis as well as planning MRI has a superior soft tissue contrast but lacks the electron density information for the dose calculation alternative approaches use synthetic CT for dose calculation The development of the MRI guided system and online adaptation can be considered as the bridge between many specialties starting from learning about MRI safety by the therapy physicist to the use of AI for robust planning Active research is done to improve the images advanced MRI techniques Nuclear medicine and PET MRI synthetic images CBCT for dose calculation for clinical workflows However all these topics have a lot of room for exploration

Life System Modeling and Intelligent Computing Kang Li, Li Jia, Xin Sun, Minrui Fei, George W. Irwin, 2010-09-02 The 2010 International Conference on Life System Modeling and Simulation LSMS 2010 and the 2010 International Conference on Intelligent Computing for Sustainable Energy and Environment ICSEE 2010 were formed to bring together researchers and practitioners in the fields of life system modeling simulation and intelligent computing applied to worldwide sustainable energy and environmental applications A life system is a broad concept covering both micro and macro components ranging from cells tissues and organs across to organisms and ecological niches To comprehend and predict the complex behavior of even a simple life system can be tremendously difficult using conventional approaches To meet this challenge a variety of new theories and methodologies have emerged in recent years on life system modeling and simulation Along with improved understanding of the behavior of biological systems novel intelligent computing paradigms and techniques have emerged to handle complicated real world problems and applications In particular intelligent computing approaches have been valuable in the design and development of systems and facilities for achieving sustainable energy and a sustainable environment the two most challenging issues currently facing humanity The two LSMS 2010 and ICSEE 2010 conferences served as an important platform for synergizing these two research streams
