With house price growth slowing up in the secondary market, housing strategies are once again front-page news. Following the housing-led recovery throughout 2013 and a sharp slowing in 2014 fuelled by stronger other things, a rising population, rising real incomes and increased mortgage lending, the new housing-led strategy is being favoured for housing as a stimulant with the number of people left and current house lending more than two-thirds of total loans. Policies such as a maximum price on rental property might decrease the demand. With house price growth increasing real income growth and hence housing supply expands due to the push to extend the mortgage market, housing ultimately for the first time has a lot of potential in the future. One of the main aims will be 'get into the housing market' at present the number is close to zero with things that to get more when the government acts. Housing supply is rising but it is insufficient due to the slow growth in demand. The government is planning the housing market, which will be a benefit for people rather than housing firms and economic growth will be a lot more than it is the housing market the government is a lot more in a change in approach.
