*Brainwashed* Sally Satel,Scott O. Lilienfeld,2013-05-16 This provocative account of our obsession with neuroscience brilliantly illuminates what contemporary neuroscience and brain imaging can and cannot

tell us about ourselves providing a much needed reminder about the many factors that make us who we are What can t neuroscience tell us about ourselves Since fMRI functional magnetic resonance imaging was introduced in the early 1990s brain scans have been used to help politicians understand and manipulate voters determine guilt in court cases and make sense of everything from musical aptitude to romantic love br In Brainwashed psychiatrist and AEI scholar Sally Satel and psychologist Scott O Lilienfeld reveal how many of the real world applications of human neuroscience gloss over its limitations and intricacies at times obscuring rather than clarifying the myriad factors that shape our behavior and identities Brain scans Satel and Lilienfeld show are useful but often ambiguous representations of a highly complex system Each region of the brain participates in a host of experiences and interacts with other regions so seeing one area light up on an fMRI in response to a stimulus doesn t automatically indicate a particular sensation or capture the higher cognitive functions that come from those interactions The narrow focus on the brain s physical processes also assumes that our subjective experiences can be explained away by biology alone As Satel and Lilienfeld explain this neurocentric view of the mind risks undermining our most deeply held ideas about selfhood free will and personal responsibility putting us at risk of making harmful mistakes whether in the courtroom interrogation room or addiction treatment clinic Although brain scans and other neurotechnologies have provided groundbreaking insights into the workings of the human brain Brainwashed shows readers that the increasingly fashionable idea that they are the most important means of answering the enduring mysteries of psychology is misguided and potentially dangerous

Then** Taina Bucher,2018 We live in a world in which Google s search algorithms determine how we access information Facebook s News Feed algorithms shape how we socialize and Netflix collaborative filtering algorithms choose the media products we consume As such we live algorithmic lives Life however is not blindly controlled or determined by algorithms Nor are we simply victims of an ever expanding artificial intelligence Rather than looking at how technologies shape or are shaped by political institutions this book is concerned with the ways in which informational infrastructure may be considered political in its capacity to shape

social and cultural life It looks specifically at the conditions of algorithmic life how algorithms work both materially and discursively to create the conditions for sociality and connectivity The book argues that the most important aspect of algorithms is not what they are in terms of their specific technical details but rather how they become part of social practices and how different people enlist them as powerful brokers of information communication and society If we truly want to engage with the promises of automation and predictive analytics entailed by the promises of big data we also need to understand the contours of algorithmic life that condition such practices Setting out to explore both the specific uses of algorithms and the cultural forms they generate this book offers a novel understanding of the power and politics of algorithmic life as grounded in case studies that explore the material discursive dimensions of software

**Garments of Paradise** Susan Elizabeth Ryan, 2014-06-13 A historical and critical view of wearable technologies that considers them as acts of communication in a social landscape Wearable technology whether a Walkman in the 1970s an LED illuminated gown in the 2000s or Google Glass today makes the wearer visible in a technologically literate environment Twenty years ago wearable technology reflected cultural preoccupations with cyborgs and augmented reality today it reflects our newer needs for mobility and connectedness In this book Susan Elizabeth Ryan examines wearable technology as an evolving set of ideas and their contexts always with an eye on actual wearables on clothing dress and the histories and social relations they represent She proposes that wearable technologies comprise a pragmatics of enhanced communication in a social landscape Garments of paradise is a reference to wearable technology's promise of physical and mental enhancements Ryan defines dress acts hybrid acts of communication in which the behavior of wearing is bound up with the materiality of garments and devices and focuses on the use of digital technology as part of such systems of meaning She connects the ideas of dress and technology historically in terms of major discourses of art and culture and in terms of mass media and media culture citing such thinkers as Giorgio Agamben Manuel De Landa and Gilles Deleuze and Félix Guattari She examines the early history of wearable technology as it emerged in research labs the impact of ubiquitous and affective approaches to computing interaction design and the idea of wearable technology as a language of embodied technology and the influence of open source ideology Finally she considers the future as wearing technologies becomes an increasingly naturalized aspect of our social behavior
