Chapter 1-Answer Key

CONCEPT CHECK

1.1 What is the hydrologic cycle? What are the pathways that precipitation falling onto the land surface of the Earth is dispersed to the hydrologic cycle?

ANSWER:

The hydrologic cycle is a continuous process in which water is evaporated from water surfaces and the oceans, moves inland as moist air masses, and produces precipitation if the correct vertical lifting conditions exist.

A portion of precipitation (rainfall) is retained in the soil near where it falls and returns to the atmosphere via evaporation (the conversion of water to water vapor from a water surface) and transpiration (the loss of water vapor through plant tissue and leaves). Combined loss is called evapotranspiration and is a maximum value if the water supply in the soil is adequate at all times. Some water enters the soil system in infiltration which is a function of soil moisture conditions and soil and may reenter channels later as interflow or may percolate to recharge the shallow ground water. The remaining portion of precipitation becomes overland flow or direct runoff which flows generally in a down-gradient direction to accumulate in local streams that then flow into rivers.

Nature-Based Solutions for Urban Water Management Junguo Liu, Zhan Tian, Qinhua Ye, Laixiang Sun, Shiqiang Wu, 2024-02-23 Water plays an essential role in the development and functioning of a city but could also be a key risk factor for urban pluvial flooding which may occur more frequently in the context of future climate change The traditional means of flood risk management relied heavily on engineering measures or the use of gray infrastructure Recently there has been a call to integrate nature based solutions NBS which make use of natural processes and ecosystem services with conventional engineering approaches NBS infrastructures and designs pay great attention to ecosystem services considerations in assessing their induced hydrological processes as well as in managing the stormwater and mitigating urban flood and droughts Nevertheless compared with grey infrastructure larger space could be demanded for NBS while the buffer effect for NBS in extremes events is still uncertain for evaluation

Hydrology and Floodplain Analysis Philip B. Bedient, Wayne Charles Huber, 2002 Now in its third edition *Hydrology and Floodplain Analysis* continues to offer a clear and up to date presentation of the fundamental concepts and design methods required to understand hydrology and floodplain analysis It addresses the computational emphasis of modern hydrology and provides a balanced approach to important applications in watershed analysis floodplain computation flood control urban hydrology stormwater design and computer modeling Includes HEC HMS HEC RAS and SWMM models plus GIS and radar rainfall The text is ideal for students taking an undergraduate or graduate course on hydrology while the practicing engineer should value the book as a modern reference for hydrologic principles flood frequency analysis floodplain analysis computer simulation and hydrologic storm water design Updated coverage in the third edition includes Three New Chapters Chapter 1 Geographic Information Systems GIS Chapter 2 Use of NEXRAD Radar Data Chapter 3 Floodplain Management Issues in Hydrology A new detailed case study of a complex watershed using GIS linked with radar technology New tools and technologies used for watershed analysis hydrologic modeling and modern floodplain delineation New examples and homework problems in each chapter

Flood Handbook Saeid Eslamian, Faezeh A. Eslamian, 2022-04-18 Floods are difficult to prevent but can be managed in order to reduce their environmental social cultural and economic impacts Flooding poses a serious threat to life and property and therefore it is very important that flood risks be taken into account during any planning process This handbook presents different aspects of flooding in the context of a changing climate and across various geographical locations Written by experts from around the world it examines flooding in various climates and landscapes taking into account environmental ecological hydrological and geomorphic factors and considers urban agriculture rangeland forest coastal and desert areas Features Presents the main principles and applications of the science of floods including engineering and technology natural science as well as sociological implications Examines flooding in various climates and diverse landscapes taking into account environmental ecological hydrological and geomorphic factors Considers floods in urban agriculture rangeland forest coastal and desert
