Whan Ahn, 2021-04-22 The Special Issue book introduces advanced techniques and research that have helped to reduce CO₂ emissions and to use CO₂ for the manufacturing of valuable products This book refers the research trends and emerging technologies contributing to the mitigation of current climate change It covers multidisciplinary research topics such as carbon mineralization solid waste management and convergence technologies for sustainable solutions for climate change

Nuclear Science Abstracts, 1966 **Elementary Differential Equations and Boundary Value Problems** William E. Boyce, Richard C. DiPrima, Douglas B. Meade, 2017-08-21 Elementary Differential Equations and Boundary Value Problems 11e like its predecessors is written from the viewpoint of the applied mathematician whose interest in differential equations may sometimes be quite theoretical sometimes intensely practical and often somewhere in between The authors have sought to combine a sound and accurate but not abstract exposition of the elementary theory of differential equations with considerable material on methods of solution analysis and approximation that have proved useful in a wide variety of applications While the general structure of the book remains unchanged some notable changes have been made to improve the clarity and readability of basic material about differential equations and their applications In addition to expanded explanations the 11th edition includes new problems updated figures and examples to help motivate students The program is primarily intended for undergraduate students of mathematics science or engineering who typically take a course on differential equations during their first or second year of study The main prerequisite for engaging with the program is a working knowledge of calculus gained from a normal two or three semester course sequence or its equivalent Some familiarity with matrices will also be helpful in the chapters on systems of differential equations **Complex fluids** Pierre

Saramito, 2016-10-26 This book presents a comprehensive overview of the modeling of complex fluids including many common substances such as toothpaste hair gel mayonnaise liquid foam cement and blood which cannot be described by Navier Stokes equations It also offers an up to date mathematical and numerical analysis of the corresponding equations as well as several practical numerical algorithms and software solutions for the approximation of the solutions It discusses industrial molten plastics forming process geophysical mud flows volcanic lava glaciers and snow avalanches and biological blood flows tissues modeling applications This book is a valuable resource for undergraduate students and researchers in applied mathematics mechanical engineering and physics **U.S. Geological Survey Circular**, 1984 **1987 Annual**
