

KEY: Exploring Meiosis

Identifying Processes

In the following table, place the phases in order (1 through 9). Once you have done that, identify the name of the phase (word bank: Prophase I, Prophase I, Telophase II, Telophase I, Anaphase I, Anaphase II, Anaphase II, Metaphase I, 1st interphase)

#	Order	Phase name	Events of this stage
1	4	Metaphase I	Homologous pairs of chromosomes line up in the center of the cell, independently assorting
2	5	Anaphase I	Spindle fibers pull homologous pairs to opposite ends of the cell
3	9	Telophase II	4 haploid (n) daughter cells form
4	1	Interphase	Cells undergo a round of DNA replication
5	7	Anaphase II	Sister chromatids separate from each other
6	6	Telophase I	2 haploid (n) daughter cells form
7	3	Prophase I	Spindle fibers attach to the homologous chromosome pairs
8	8	Anaphase II	Individual chromatids move to each end of the cell
9	2	Prophase I	Crossing over (if any) occurs

Short Answer

10. Compare the number and type of cells that result from meiosis vs mitosis.

Argument-driven Inquiry in Biology Victor Sampson,2014-04-01 Are you interested in using argument driven inquiry for

high school lab instruction but just aren't sure how to do it. You aren't alone. This book will provide you with both the information and instructional materials you need to start using this method right away. **Argument Driven Inquiry in Biology** is a one-stop source of expertise, advice, and investigations. The book is broken into two basic parts: 1. An introduction to the stages of argument-driven inquiry from question identification, data analysis, and argument development and evaluation to double-blind peer review and report revision. 2. A well-organized series of 27 field-tested labs that cover molecules and organisms, ecosystems, heredity, and biological evolution. The investigations are designed to be more authentic scientific experiences than traditional laboratory activities. They give your students an opportunity to design their own methods, develop models, collect and analyze data, generate arguments, and critique claims and evidence. Because the authors are veteran teachers, they designed **Argument Driven Inquiry in Biology** to be easy to use and aligned with today's standards. The labs include reproducible student pages and teacher notes. The investigations will help your students learn the core ideas, crosscutting concepts, and scientific practices found in the Next Generation Science Standards. In addition, they offer ways for students to develop the disciplinary skills outlined in the Common Core State Standards. Many of today's teachers like you want to find new ways to engage students in scientific practices and help students learn more from lab activities. **Argument Driven Inquiry in Biology** does all of this even as it gives students the chance to practice reading, writing, speaking, and using math in the context of science. **Classroom Assessment and Grading That Work** Robert J. Marzano, 2006-12-08

Classroom Assessment and Grading That Work Robert J. Marzano provides an in-depth exploration of what he calls one of the most powerful weapons in a teacher's arsenal. An effective standards-based formative assessment program can help to dramatically enhance student achievement throughout the K-12 system. Marzano says, "Drawing from his own and others' extensive research, the author provides comprehensive answers to questions such as these: What are the characteristics of an effective assessment program? How can educators use national and state standards documents as a basis for creating a comprehensive topic-based assessment system? What types of assessment items and tasks are best suited to measuring student progress in mastering information, mental procedures, and psychomotor procedures? Why does the traditional point system used for scoring often lead to incorrect conclusions about a student's actual knowledge? What types of scoring and final grading systems provide the most accurate portrayal of a student's progress along a continuum of learning? In addition to providing teachers with all the tools they need to create a better assessment system, **Classroom Assessment and Grading That Work** makes a compelling case for the potential of such a system to transform the culture of schools and districts and to propel K-12 education to new levels of effectiveness and efficiency."

Genetics: A Conceptual Approach Benjamin A. Pierce, 2012 Ben Pierce is recognized for his ability to make the complex subject of genetics as accessible as possible, giving students the big picture. Molecular Architecture and Dynamics of Meiotic Chromosomes Ricardo Benavente, Mónica Pradillo, Pedro A. San-Segundo, 2024-03-11

Meiosis is a special type of cell division that allows the generation of haploid gametes and is a key process for sexual reproduction of animals, plants, and fungi. Haploidization requires that meiotic cells undergo a series of unique processes, namely pairing, synapsis, recombination, and segregation of homologous chromosomes. This involves profound meiosis-specific changes in the protein composition and architecture of homologous chromosomes, as well as of the condensation and folding of chromatin that require a critical timing and regulation. Despite this enormous complexity, different organisms may achieve haploidization through common molecular mechanisms. A major goal of this article collection is to provide an overview of how meiotic chromosomes and their components are critically involved in the mechanisms of haploidization and how dynamic protein complexes yield important structural intermediates and temporal regulation to this process. We welcome submissions of original articles, mini reviews, and review articles dealing with the composition, architecture, function, and regulation of meiotic chromosomes of animals, plants, and fungi using microscopic, biochemical, molecular, genetic, and/or omic techniques.
