Brotherhood of Locomotive Engineer's Monthly Journal ,1900 *Martian Gullies and their Earth Analogues* S.J. Conway, J.L. Carrivick, P.A. Carling, T. de Haas, T.N. Harrison, 2019-01-21 Gullies on Mars resemble terrestrial gullies involved in the transport of abundant material down steep slopes by liquid water However liquid water should not be stable at the Martian surface The articles in this volume present the two main opposing theories for Martian gully formation climate driven melting of surficial water ice deposits and seasonal dry ice sublimation The evidence presented ranges from remote sensing observations to experimental simulations to comparison with Earth analogues The opposing hypotheses imply either that Mars has been unusually wet in the last few million years or that it has remained a cold dry desert both with profound implications for understanding the water budget of Mars and its habitability The debate questions the limits of remote sensing data and how we interpret active processes on extra terrestrial planetary surfaces even beyond those on Mars as summarized by the review paper at the beginning of the book

Brotherhood of Locomotive Engineers' Monthly Journal ,1900 **Locomotive Engineers Journal** ,1900 *Ice Adhesion* K. L. Mittal, Chang-Hwan Choi, 2020-10-21 This unique book presents ways to mitigate the disastrous effects of snow ice accumulation and discusses the mechanisms of new coatings deicing technologies The strategies currently

used to combat ice accumulation problems involve chemical mechanical or electrical approaches These are expensive and labor intensive and the use of chemicals raises serious environmental concerns The availability of truly icephobic surfaces or coatings will be a big boon in preventing the devastating effects of ice accumulation Currently there is tremendous interest in harnessing nanotechnology in rendering surfaces icephobic or in devising icephobic surface materials and coatings and all signals indicate that such interest will continue unabated in the future As the key issue regarding icephobic materials or coatings is their durability much effort is being spent in developing surface materials or coatings which can be effective over a long period With the tremendous activity in this arena there is strong hope that in the not too distant future durable surface materials or coatings will come to fruition This book contains 20 chapters by subject matter experts and is divided into three parts Part 1 Fundamentals of Ice Formation and Characterization Part 2 Ice Adhesion and Its Measurement and Part 3 Methods to Mitigate Ice Adhesion The topics covered include factors influencing the formation adhesion and friction of ice ice nucleation on solid surfaces physics of ice nucleation and growth on a surface condensation frosting defrosting properties of structured surfaces relationship between surface free energy and ice adhesion to surfaces metrology of ice adhesion test methods for quantifying ice adhesion strength to surfaces interlaboratory studies of ice adhesion strength mechanisms of surface icing and deicing technologies icephobicities of superhydrophobic surfaces anti icing using microstructured surfaces icephobic surfaces features and challenges bio inspired anti icing surface materials durability of anti icing coatings durability of icephobic coatings bio inspired icephobic coatings protection from ice accretion on aircraft and numerical modeling and its application to inflight icing **Technical Report** Cold Regions Research and Engineering Laboratory (U.S.),1951

Metallogenic Mechanism of the Galinge Polymetallic Iron Skarn Deposit, Qiman Tagh Mountains, Qinghai Province Miao Yu,2019-02-15 This thesis summarizes the metallogenetic mechanism of the Galinge skarn deposit based on integrated knowledge of tectonics geochemistry geochronology petrology mineralogy thermodynamics and hydrothermal fluids It also discusses the multistage growth characteristics of various skarn minerals in which the varying compositions reflect the evolution of the hydrothermal fluid The multidisciplinary nature of this research sheds new light on reconstructing metallogenetic processes successfully It outlines the main aspects of skarn zonation based on the dominant contents of the skarn minerals and the wall rock compositions In addition it focuses on volatile rich minerals including tourmaline and hastingsite highlighting the importance of the volatile component in the skarn deposit Lastly it describes the regional tectonic magmatic evolutionary history to explain the metallogenic principles which can be used to guide prospecting in the

field Robert Frost and Northern Irish Poetry Rachel Buxton,2004-05-27 In this incisive and highly readable study Rachel Buxton offers a much needed assessment of Frost s significance for Northern Irish poetry of the past half century Drawing upon a diverse range of previously unpublished archival sources including juvenilia correspondence and drafts of poems Robert Frost and Northern Irish Poetry takes as its particular focus the triangular dynamic of Frost Seamus Heaney and Paul Muldoon Buxton explores the differing strengths which each Irish poet finds in Frost s work while Heaney is drawn primarily to the Frost persona and to the sound of sense it is the studied slyness and wryness of the American s poetry the complicating undertow which Muldoon values This appraisal of Frost in a non American context not only enables a fuller appreciation of Heaney s and Muldoon s poetry but also provides valuable insight into the nature of trans national and trans generational poetic influence Engaging with the politics of Irish American literary connections while providing a subtle analysis of the intertextual relationships between these three key twentieth century poets Robert Frost and Northern Irish Poetry is a pioneering work Contact Metamorphism Derrill M. Kerrick,2018-12-17 Volume 26 of Reviews in Mineralogy provides a multidisciplinary review of our current knowledge of contact metamorphism As in any field of endeavor we are provided with new questions thereby dictating future directions of study Hopefully this volume will provide inspiration and direction for future research on contact metamorphism The Mineralogical Society of America sponsored the short course on Contact Metamorphism October 17 19 1991 at the Pala Mesa Resort Fallbrook California prior to its annual meeting with the Geological Society of America **Thermodynamics in Earth and Planetary Sciences** Jibamitra Ganguly,2009-06-29 Based on a university course this book provides an exposition of a large spectrum of geological geochemical and geophysical problems that are amenable to thermodynamic analysis It also includes selected problems in planetary sciences relationships between thermodynamics and microscopic properties particle size effects methods of approximation of thermodynamic properties of minerals and some kinetic ramifications of entropy production The textbook will enable graduate students and researchers alike to develop an appreciation of the fundamental principles of thermodynamics and their wide ranging applications to natural processes and systems **Peninsular Ranges Batholith, Baja and Southern California** Douglas M. Morton,Fred K. Miller,2014 This book includes petrology geochronology and regional aspects of individual plutons as well as evolution of the Peninsular Ranges batholith Several chapters deal with geophysical chemical and isotopic based interpretations of the genesis and evolution of the batholith An accompanying DVD contains detailed colored maps and chemical isotopic mineralogic and physical properties data Provided by publisher *Petrogenesis of Metamorphic Rocks* Kurt Bucher,2023-01-27 This new edition of the classic textbook presents a large number of diagrams showing the stability relations among minerals and groups of minerals found in metamorphic rocks The diagrams help to determine the pressure and temperature conditions under which a given set of metamorphic rocks may have formed Other parameters that control metamorphic mineral assemblages are also discussed and pitfalls resulting from simplifications and generalizations are

highlighted The book discusses the most common metamorphic rock types their nomenclature structure and graphical representation of their mineral assemblages Part I defines basic principles of metamorphism introduces metamorphic processes geologic thermometry and barometry and defines metamorphic grade Part II presents in a systematic way mineralogical changes and assemblages found in the most common types of metamorphic rocks The computation of diagrams is based on recent advances in quantitative petrology and geochemistry An extensive bibliography including the key contributions and classic papers in the field make it an invaluable source book for graduate students and professional geologists Applied Mechanics Reviews ,1995 List of Bureau of Mines Publications and Articles ... with Subject and Author Index United States.
