Biological Functions for Information and Communication Technologies Hidefumi Sawai, 2011-01-13 By incorporating biologically inspired functions into ICT various types of new generation information and communication systems can be created Just some example of areas already benefiting from such design inspiration are network architectures information processing molecular communication and complex network modeling for solving real world problems This book provides the theoretical basis for understanding these developments and explains their practical applications Highlighted inserts appears throughout to help readers to understand the very latest topics in these emerging research fields The book ends with a more philosophical discussion on how new ICT solutions can be found by looking at analogous systems in biology This new way of thinking may help researchers and practitioners to apply innovative ideas in developing next generation technologies Advanced Biotechnology R C Dubey, 2014 The book embodies 22 chapters covering various important disciplines of biotechnology such as cell biology molecular biology molecular genetics biophysical methods genomics and proteomics metagenomics enzyme technology immune technology transgenic plants and animals industrial microbiology and environmental biotechnology The book is illustrative It is written in a simple language Biophysical Chemistry of Proteins Engelbert Buxbaum, 2025-07-10 This textbook designed for all scientists interested in protein research provides a thorough overview of laboratory methods for the biophysical chemistry of proteins This new edition completely restructured and expanded for ease of learning includes sections on analytical techniques working with proteins protein size and shape protein structure enzyme kinetics industry enzymology and a new section on special statistics **Structure and Function of Plasma Membranes** The Open The Open Courses Library, 2019-11-08 Structure and Function of Plasma Membranes Biology The plasma membrane the cell membrane has many functions but the most basic one is to define the cell s borders and keep the cell functional The plasma membrane is selectively permeable This means that the membrane allows some materials to freely enter or leave the cell while other materials cannot move freely but require a specialized structure and occasionally even energy investment for crossing Chapter Outline Components and Structure Passive Transport Active Transport Bulk Transport The Open Courses Library introduces you to the best Open Source Courses **Membranes** Raz Jelinek, 2018-05-07 Describes the properties of cellular membranes and their relationship with fundamental biological processes This book provides insight on the chemistry structures model systems and techniques employed for studying membrane properties and processes A major focus is on the prominence of membranes in diverse physiological processes and disease as well as applications of membranes and biomimetic membrane systems in varied disciplines The book aims to illuminate the significance and beauty of membrane science and serve both as an entry point for scholars wishing to embark on membrane research as well as scientists already working in the field *Control of Membrane Function: short-term and long-term* J.M. Ritchie, P. Magistretti, L. Bolis, 2012-12-02 A critical factor in cell to cell interactions is the presence in the cell

membrane of highly specific ion channels controlled by specific receptors that are bound to and activated by a gamut of external hormones and neurotransmitters Through both this action on ion channels and action on other membrane components such as G proteins extracellular signals alter intracellular events usually through the mediation of second messengers and so provide the basis for the transduction mechanism connecting extracellular signals with intracellular effectors This volume deals with the various ways that such membrane function is controlled

RESEARCH INTO MEMBRANE ASSOCIATED PHENOMENA HAS EXPANDED VERY greatly in the five years that have elapsed since the first edition of Biological Membranes was published It is to take account of rapid advances in the field that we have written the present edition There is now general acceptance of the fluid mosaic model of membrane structure and of the chemiosmotic interpretation of energetic processes and our attention has shifted from justifying these ideas to explaining membrane functions in their terms Much more information has become available concerning the role of the plasma membrane in the cell s recognition of and response to external signals and this is reflected in the increased coverage of these topics in the book The general form of the book remains the same As before a list of suggested reading sub divided by chapter is provided and this has been expanded to include a greater proportion of original papers The book is still primarily designed as an advanced undergraduate text and also to serve as an introduction for post graduate workers entering the field of membrane research We have taken cognizance of the comments of many reviewers colleagues and students on the first edition and thank them for their contributions In particular we wish to acknowledge our colleagues R Eisenthal G D Holman
