has been completely transformed through the use of IT We have now reached a new inflection point Here we present for the first time how in memory computing is changing the way businesses are run Today enterprise data is split into separate databases for performance reasons Analytical data resides in warehouses synchronized periodically with transactional systems This separation makes flexible real time reporting on current data impossible Multi core CPUs large main memories cloud computing and powerful mobile devices are serving as the foundation for the transition of enterprises away from this restrictive model We describe techniques that allow analytical and transactional processing at the speed of thought and enable new ways of doing business The book is intended for university students IT professionals and IT managers but also for senior management who wish to create new business processes by leveraging in memory computing

Brassel, Hans-Jörg Schek, 1999-03-04 This book constitutes the refereed proceedings of the Second International Conference on Interoperating Geographic Information Systems INTEROP 99 held in Zurich Switzerland in March 1999 The volume presents 22 revised full papers carefully reviewed and selected for inclusion in the book Also included are three invited full papers The book addresses various topics of database interoperability and spatial data processing in particular identification infrastructure implementation vectors and graphics semantics heterogeneous databases and representation

Building Bioinformatics Solutions 2nd Edition Conrad Bessant, Darren Oakley, Ian Shadforth, 2014 This book introduces the reader to all the key concepts and technologies needed to begin developing their own bioinformatics tools The new edition includes more bioinformatics specific content and a new chapter on good software engineering practices to help people working in teams

Spatial Database Systems Albert K.W. Yeung, G. Brent Hall, 2007-05-23 The decision to write this book was motivated by a number of factors First although several useful textbooks on spatial databases have recently been published this is an area of spatial information science that has lagged somewhat behind the rapid advances of the technology and the profusion of books on domain specific applications Second much of the information pertaining to spatial database technologies is only available in scattered journal papers and conference proceedings and prior to this book no single effort has been made to sift through this expansive literature and unite the key contributions in a single volume The tasks of sourcing and coherently integrating relevant contributions is daunting for students many of whom have a substantial number of competing demands placed on them This book should make the task of knowledge building less daunting Third and perhaps most importantly an apparent trend in many spatial information science programs is to focus from first or second year undergraduate through to fourth year courses on learning to work confidently and independently with increasingly complex software tools Hence many courses are technical in nature and while they continue to produce technically adept students knowledge of the broader aspects of spatial databases is often not as complete as it might be among graduates Some programs have sought to address this by introducing courses that focus on spatial data management However these courses are largely unsupported by a relevant and contemporary textbook

Emerging Solutions for Future Manufacturing Systems Luis M. Camarinha-Matos, 2006-01-04 Industries and particularly the manufacturing sector have been facing difficult challenges in a context of socio economic turbulence characterized by complexity as well as the speed of change in causal interconnections in the socio economic environment In order to respond to these challenges companies are forced to seek new technological and organizational solutions In this context two main characteristics emerge as key properties of a modern automation system agility and distribution Agility because systems need not only to be flexible in order to adjust to a number of a priori defined scenarios but rather must cope with unpredictability Distribution in the sense that automation and business processes are becoming distributed and supported by collaborative networks Emerging Solutions for Future Manufacturing Systems includes the papers selected for the BASYS 04 conference which was held in Vienna Austria in September 2004 and sponsored by the International Federation for Information Processing IFIP Handbook of Data Intensive Computing Borko Furht, Armando
