Resources in Education ,2001-04 Reports and Memoranda ,1966 Beginning with no 650 each hundredth number contains a list of the Reports and memoranda published since the last list *Negatively Buoyant Jets in a Cross Flow* Jerry Lee Anderson, Frank L. Parker, Barry A. Benedict, 1973 Negatively buoyant jets or sinking jets can be observed in many problems of pollutant discharge Any chemical waste that is heavier than the receiving water into which it is discharged may act as a negatively buoyant jet In addition when water is taken from the hypolimnion of a deep lake or reservoir and used as cooling water the temperature and consequently the discharge may behave like a negatively buoyant jet Two existing jet diffusion models have been utilized to predict the trajectory and dilution of a positively buoyant jet or a rising jet and have been modified to account for the sinking effect Twenty four experimental investigations were conducted involving different combinations of densimetric Froude number velocity ratios and initial angle of discharge Salt was used as the tracer yielding a fluid that was denser than the ambient receiving water and facilitated measuring concentration profiles of the jet plume The coefficient of entrainment the major mechanism of dilution was determined as a function of the densimetric Froude number velocity ratio and initial angle of discharge The reduced drag coefficient was chosen as zero for both models since any other value would predict a trajectory whose rise would be less than experimentally observed For all angles of discharge the entrainment coefficient increased with a decrease in the velocity ratio and with an increase in densimetric Froude number Additionally there was a marked decrease in the entrainment coefficient with a decrease in the initial angle of discharge Page ii **Research Reporting Series** ,1973 *Transactions* Institute of Marine Engineers, 1947 **Nuclear Safety** ,1963 Monthly Catalog of United States Government Publications United States.
