This book presents fundamental concepts and technologies to tackle interoperability between information systems It details interoperability at the data service and process level and combines theoretical foundations with hands on presentation of technologies to enable the development of sound and practical integration Chapter 1 details general interoperability challenges and describes the structure of the book To start with Chapter 2 presents technologies for the exchange of data between two selected and highly relevant data formats i e relational databases and XML Next Chapter 3 explains concepts for schema matching and mapping and data integration as well as the technological basis for implementing them based on query and transformation languages

like XPath and XSLT Chapter 4 then turns to service interoperability and explains two related technologies REST and GraphQL in detail In Chapter 5 fundamentals for designing process orchestrations at the conceptual level are presented focusing on how to model process orchestrations and how to verify their correctness and soundness and showing BPMN as the de facto modeling standard Chapter 6 then details the concepts and languages for the implementation of process orchestrations including the presentation of execution languages for process orchestrations that are equipped with a formal semantics e g Workflow Nets the Refined Process Structure Tree and CPEE Trees Subsequently Chapter 7 focuses on the growing number of distributed loosely coupled and often non interoperable applications through the concepts of enterprise application integration and explains these by an implementation in CPN Tools and by two case studies Eventually Chapter 8 is lifting the orchestration and integration concepts and technologies to the choreography level by dealing with the interoperability between different process orchestrations Chapter 9 concludes the book by featuring success factors for interoperability projects It also provides a range of open research directions for interoperability such as compliance sensor fusion and blockchain technologies The book is mainly intended as a textbook to be used for developing and teaching courses on interoperability and integration To this end it is accompanied by a Web site with additional teaching materials It also spans a bridge from researchers to graduate students and practitioners by providing a deep understanding on practical interoperability challenges and solutions The focus here is put on de facto standards and open source systems and tools to enable interoperability solutions at low cost

Event Processing in Action Peter Niblett, Opher Etzion, 2010-08-14 Unlike traditional information systems which work by issuing requests and waiting for responses event driven systems are designed to process events as they occur allowing the system to observe react dynamically and issue personalized data depending on the recipient and situation Event Processing in Action introduces the major concepts of event driven architectures and shows how to use design and build event processing systems and applications Written for working software architects and developers the book looks at practical examples and provides an in depth explanation of their architecture and implementation Since patterns connect the events that occur in any system the book also presents common event driven patterns and explains how to detect and implement them Throughout the book readers follow a comprehensive use case that incorporates all event processing programming styles in practice today Purchase of the print book comes with an offer of a free PDF ePub and Kindle eBook from Manning Also available is all code from the book
