underscoring the controversial effect of nitrification on increasing soil acidity over time Addresses the old and new approaches to humic acids by comparing the traditional operational concept against the currently proposed supramolecular and pseudomicellar concept Proposes soil organics such as nucleic acids of DNA and others to also adsorb cation ions held as diffusive ion clouds around the polymers Tan explains in easy and simple language the chemical make up of the four soil constituents their chemical reactions and interactions in soils as governed by basic chemical laws and their importance in agriculture industry and the environment He differentiates soil chemistry from geochemistry and physical chemistry Containing more than 200 equations 123 figures and 38 tables this popular text and resource supplies a comprehensive treatment of soil chemistry that builds a foundation for work in environmental pollution organic and inorganic soil contamination and potential ecological health and environmental health risks **Fundamentals of Physics** David
