Review of NOAA Working Group Report on Maintaining the Continuation of Long-Term Satellite Total Irradiance Observations Committee on Evaluating NOAA's Plan to Mitigate the Loss of Total Solar Irradiance Measurements from Space, Board on Atmospheric Sciences and Climate, Division on Earth and Life Studies, National Research Council, 2013-08-13 Solar irradiance is a vital source of energy input for the Earth's climate system and its variability has the potential to mitigate or exacerbate a human created climate Maintaining an unbroken record of Total Solar Irradiance TSI is critical in resolving ongoing debates regarding the potential role of solar variability in influencing Earth's climate Space borne instruments have acquired TSI data since 1978 Currently the best calibrated and lowest noise source of TSI measurements is the Total Irradiance Monitor TIM onboard NASA's Solar Radiation and Climate Experiment SORCE These TIM era data are of higher quality than the older data in the full record Thus the TSI climate data record CDR has two components There is the shorter but more accurate record of the TIM era and the full 33 year space based TSI measurement record Both are important and require preservation Review of NOAA Working Group Report on Maintaining the Continuation of Long Term Satellite Total Irradiance Observations evaluates NOAA's plan for mitigating the loss of total solar irradiance measurements from space given the likelihood of losing this capacity from instruments currently on the SORCE satellite in coming years and the short term experimental nature of the currently identified method of filling the data gap This report evaluates NOAA's plan for mitigating the gap in total solar irradiance data *Genetic Programming Theory and Practice X* Rick Riolo, Ekaterina Vladislavleva, Marylyn D Ritchie, Jason H. Moore, 2013-05-24 These contributions written by the foremost international researchers and practitioners of Genetic Programming GP explore the synergy between theoretical and empirical results on real world problems producing a comprehensive view of the state of the art in GP Topics in this volume include evolutionary constraints relaxation of selection mechanisms diversity preservation strategies flexing fitness evaluation evolution in dynamic environments multi objective and multi modal selection foundations of evolvability evolvable and adaptive evolutionary operators foundation of injecting expert knowledge in evolutionary search analysis of problem difficulty and

Integrated Systems Anthony P. Ambler, John W. Sheppard, 2025-02-20 The creation of complex integrated systems is in itself complex It requires immense planning and a large team of people with diverse backgrounds based in dispersed geographical locations and countries supposedly working to a coordinated schedule and cost The systems engineering task is not new but recent scales most definitely are The world is now capable of designing and manufacturing systems whose complexity was not considered possible 10 years ago While many are trained to think in terms of a complete system where everything is designed and produced by a single project team today such systems involve integrating subsystems and components which are also complex that have been developed by other project teams Inevitably this introduces additional complexities involving elements out of the direct control of the project but which are essential to its overall success In addition to traditional systems engineering topics of hardware and software design testability and manufacturability there are wider issues to be contemplated project planning communication language an issue for international teams units of measure imperial vs metric used across members of the team supply chains pandemics military action and natural disasters legal issues based on place of production and sale the ethics associated with target use and the threat of cyberattack This book is the first attempt to bring many of these issues together to highlight the complexities that need to be considered in modern system design It is neither exhaustive nor comprehensive but it gives pointers to the topics for the reader to follow up on in more detail *Value of Information and Flexibility* Martin J. Vilela, Gbenga F. Oluyemi, 2021-10-21 This book presents a consistent methodology for making decisions under uncertain conditions as is almost always the case Tools such as value of information and value of flexibility are explored as a means to make more complex and nuanced decisions The book develops the complete formalism for assessing the value of acquiring information with two novel approaches Firstly it integrates the fuzzy characteristics of data and secondly develops a methodology for assessing data acquisition actions that optimize the value of projects from a holistic perspective The book also discusses the formalism for including flexibility in the project decision assessment Practical examples of oil and gas related decision problems are included and discussed to facilitate the learning process This book provides valuable advice and case studies applicable to engineers researchers and graduate students particularly in the oil and gas industry and pharmaceutical industry
