Biomechatronics: Harmonizing Mechatronic Systems with Human Beings Dingguo Zhang, Venketesh Dubey, Wenwei Yu, Kin Huat Low, 2019-02-05 This eBook provides a comprehensive treatise on modern biomechatronic systems centred around human applications. A particular emphasis is given to exoskeleton designs for assistance and training with advanced interfaces in human machine interaction. Some of these designs are validated with experimental results which the reader will find very informative as building blocks for designing such systems. This eBook will be ideally suited to those researching in biomechatronic area with bio feedback applications or those who are involved in high end research on man machine interfaces. This may also serve as a textbook for biomechatronic design at post graduate level.

Control and Optimization of Distributed Generation Systems Magdi S. Mahmoud, Fouad M. AL-Sunni, 2015-05-14 This text is an introduction to the use of control in distributed power generation. It shows the reader how reliable control can be achieved so as to realize the potential of small networks of diverse energy sources either singly or in coordination for meeting concerns of energy cost, energy security and environmental protection. The book demonstrates how such microgrids interconnecting groups of generating units and loads within a local area can be an effective means of balancing electrical supply and demand. It takes advantage of the ability to connect and disconnect microgrids from the main body of the power grid to give flexibility in response to special events planned or unplanned. In order to capture the main opportunities for expanding the power grid and to present the plethora of associated open problems in control theory, *Control and Optimization of Distributed Generation Systems* is organized to treat three key themes: namely, system architecture and integration, modelling and analysis, and communications and control. Each chapter makes use of examples and simulations and appropriate problems to help the reader study. Tools helpful to the reader in accessing the mathematical analysis presented within the main body of the book are given in an appendix. *Control and Optimization of Distributed Generation Systems* will enable readers new to the field of

distributed power generation and networked control whether experienced academic migrating from another field or graduate student beginning a research career to familiarize themselves with the important points of the control and regulation of microgrids It will also be useful for practising power engineers wishing to keep abreast of changes in power grids necessitated by the diversification of generating methods

Cost-Effective Energy Efficient Building Retrofitting F. Pacheco-Torgal, Claes-Göran Granqvist, Bjørn Peter Jelle, Giuseppe Peter Vanoli, Nicola Bianco, Jarek Kurnitski, 2017-01-03 Cost Effective Energy Efficient Building Retrofitting Materials Technologies Optimization and Case Studies provides essential knowledge for civil engineers architects and other professionals working in the field of cost effective energy efficient building retrofitting The building sector is responsible for high energy consumption and its global demand is expected to grow as each day there are approximately 200 000 new inhabitants on planet Earth The majority of electric energy will continue to be generated from the combustion of fossil fuels releasing not only carbon dioxide but also methane and nitrous oxide Energy efficiency measures are therefore crucial to reduce greenhouse gas emissions of the building sector Energy efficient building retrofitting needs to not only be technically feasible but also economically viable New building materials and advanced technologies already exist but the knowledge to integrate all active components is still scarce and far from being widespread among building industry stakeholders Emphasizes cost effective methods for the refurbishment of existing buildings presenting state of the art technologies Includes detailed case studies that explain various methods and Net Zero Energy Explains optimal analysis and prioritization of cost effective strategies
