

Experiment no 09.

AIM: To conduct experiment of trifilar suspension.

APPARATUS REQUIRED: Main frame, Trifilar suspension, Weights, Stopwatch, Thread.

INTRODUCTION:

Trifilar Suspension (Torsional Pendulum) :- It is also used to find the moment of inertia of a body experimentally. The body (say a disc or flywheel) whose moment of inertia is to be determined is suspended by three long flexible wires A, B and C, as shown in fig.-b. When the body is twisted about its axis through a small angle θ and then released, it will oscillate with simple harmonic motion. Trifilar suspension is a disc of mass m (weight w) suspended by three vertical cords, each of length l , from a fixed support. Each cord is symmetrically attached to the disc at the same distance r from the mass of the disc.

THEORY:

The disc is now turned through a small angle its vertical axis, the cords become inclined. On being released the disc will perform oscillations about the vertical axis. At any instant

Let: θ = angular displacement of the disc

F = tension in each cord $= w/3$

Inertia torque $= I \times \alpha$

Restoring torque $= 3 \times \text{horizontal component forces of each string} \times r$

Inertia torque = restoring torque

TRIFILAR

Mechanical Vibration Lab Manual

Frederick Nicholas Petillo

Mechanical Vibration Lab Manual:

Getting the books **Mechanical Vibration Lab Manual** now is not type of challenging means. You could not unaccompanied going once book deposit or library or borrowing from your friends to get into them. This is an definitely simple means to specifically acquire guide by on-line. This online broadcast Mechanical Vibration Lab Manual can be one of the options to accompany you taking into account having new time.

It will not waste your time. acknowledge me, the e-book will unquestionably make public you additional business to read. Just invest tiny period to approach this on-line statement **Mechanical Vibration Lab Manual** as capably as evaluation them wherever you are now.
