Evaporative Cooling

With this unit being a fresh air system, you are not trapped with recirculating air that can become stale, laden with smoke and odors, as happens with refrigerated air conditioning systems. Instead, you are completely replacing the air every 2 to 4 minutes by either opening doors or windows or a combination of both to exhaust the air continually.

How much should you open your windows? To obtain the maximum cooling capacity of your cooler, you should open your windows until the air inside the house is nearly balanced with the air outside. As you open your windows you decrease the pressure buildup inside the home, and the cooler is able to output increasingly more air until the capacity of the cooler is reached.

One method to determine when the air is reasonably balanced is to place a piece of tissue paper up against the screen of the window furthest from the cooler and adjust the opening of the windows in the house until the tissue paper stays lightly on the screen. If the tissue plasters itself to the screen, open the windows more. If it falls, close the windows more.

Safety Rules

1. Read instructions carefully.
2. Unit must be in the **OFF POSITION** and **UNPLUGGED** from power receptacle when installing or performing any maintenance.
3. Your cooler will run on 120 volt A.C., 60 Hz (cycle) current only.
4. Motor and pump are grounded and have an automatic thermal overload switch which will shut motor off when it overheats. The motor will restart automatically when it cools down.

⚠WARNING: To reduce the risk of fire or electric shock, do not use this fan with any "solid-state fan speed control device."

Operation

To eliminate delivery of hot air when starting cooler, turn on pump only for the first few minutes, then turn on the blower motor.

These coolers may be used without water for ventilation purposes. When outside air is cool (for example, at night) or when humidity is high the water pump can be turned off.
