

## Student Exploration: Photoelectric Effect

**Vocabulary:** electron volt, frequency, intensity, photoelectric effect, photon, voltage, wavelength, work function

**Prior Knowledge Questions** (Do these BEFORE using the Gizmo.)

1. Suppose you went bowling, but instead of a bowling ball you rolled a ping pong ball down the alley. What do you think would happen? **No strike would be achieved, since the ping pong ball is not big enough to knock off any of the pins**
2. Suppose you rolled a lot of ping pong balls at the bowling pins. Do you think that would change the results of your experiment? Explain. **Same event will take place, none of the pins would be knocked, because the balls are small, but knocking off a pin needs to generate a lot of momentum and velocity, which can only be achieved in a vacuum**

### Gizmo Warm-up

The **photoelectric effect** occurs when tiny packets of light, called **photons**, knock electrons away from a metal surface. Only photons with enough energy are able to dislodge electrons.

In the *Photoelectric Effect Gizmo™*, check that the **Wavelength** is 500 nm, the **Intensity** is 50%, the **Voltage** is 0.0 volts, and **Potassium** is selected. Click **Flash the light** to send photons of light (green arrows) toward the surface of a metal plate encased in a vacuum tube.

1. The blue dots on the metal plate are electrons. What happens when the photons hit the electrons?  
**As a result they move across the the gradient and head towards the metal plate.**
2. What happens when the electrons reach the light bulb?  
**They turn on bulbs.**

When electrons reach the light bulb they complete a circuit, making the bulb glow briefly.
