Exploring Special Right Angles Unit 05 Lesson 01:

Mathematical Tasks in Classrooms Around the World, 2010-01-01 Mathematical tasks have long been recognized as crucial mediators between mathematical content and the mathematics learner. For many people, the mathematics classroom is defined by the type of tasks one finds there, and this is appropriate. Mathematical tasks are the embodiment of the curricular pretext that brings each particular set of individuals together in every mathematics classroom. In other contexts, individuals come together to engage in musical performances or dramatic performances. The performances of the mathematics classroom are largely the performance of mathematical tasks, and if we are to understand and facilitate the learning that is the purpose of such settings, then we must understand the nature of the performances that we find there. The classroom performance of a task is ultimately a unique synthesis of task, teacher, students, and situation. Of particular interest are differences in the function of mathematically similar tasks when employed by different teachers in different classrooms for different instructional purposes with different students. By making comparison possible between the classroom use of mathematical tasks in different classrooms around the world, the analyses reported in this book reveal the profound differences in how each teacher utilizes mathematical tasks in partnership with their students to create a distinctive form of mathematical activity. The Learner's Perspective Study aims to juxtapose the observable practices of the classroom and the meanings attributed to those practices by classroom participants. The LPS research design documents sequences of at least ten lessons using three video cameras supplemented by the reconstructive accounts of classroom participants obtained in post-lesson video-stimulated interviews and by test and questionnaire data and copies of student-written material. In each participating country, data generation focuses on the classrooms of three teachers identified by the local mathematics education community as competent and situated in demographically different school communities within the one major city. The large body of complex data supports both the characterisation of practice in the classrooms of competent teachers and the development of theory.

Enhancing Mathematics Understanding through Visualization: The Role of Dynamical Software Habre, Samer, 2013-05-31 Mathematics is by its very nature an abstract discipline However many students learn best by thinking in terms of tangible constructs Enhancing Mathematics Understanding through Visualization The Role of Dynamical Software brings these conflicting viewpoints together by offering visual representations as a method of mathematics instruction The book explores the role of technology in providing access to multiple representations of concepts using software applications to create a rich environment in which a student s understanding of

mathematical concepts can flourish Both students and instructors of mathematics at the university level will use this book to implement various novel techniques for the delivery of mathematical concepts in their classrooms This book is part of the Research Essential collection *Contemporary Mathematics in Context* Arthur F. Coxford,1998 Through investigations of real life contexts students develop a rich understanding of important mathematics that makes sense to them and which in turn enables them to make sense out of new situations and problems Page 1 **Spelling** Richard Madden,1983
