

Extending Dilations KEY

Dilations with the Center of Dilation not at the Origin

- On a sheet of grid paper, plot triangle ABC with a colored pencil with the following vertices. A(2, 6), B(8, 7) and C(4, 4).
- Plot point P(8, 2). This will be the center of dilation.
- Using point P, construct lines of extension through each of the three vertices.
- Dilate the figure by a scale factor of 2 using a different color pencil. Use the table below to record your findings.

Original Figure		Image Dilated by Scale Factor of 2 with Center Of Dilation at P(8, 2).	
Point	Coordinates	Point	Coordinates
A	(2, 6)	A'	(-4, 10)
B	(8, 7)	B'	(8, 12)
C	(4, 4)	C'	(0, 6)

- In the previous activity, you discovered that if some point (x, y) was dilated by a scale factor of some real number r with the origin as the center of dilation, then the resulting image point had coordinates $(r \cdot x, r \cdot y)$. In other words, as long as the origin was the center of dilation, image points could be found by multiplying the original coordinates by the scale factor of dilation. Does that work for the data in the table above? Explain.
No, because the image of (2, 6) is not (4, 12) and the image of (8, 7) is not (16, 14) and etc.
- Suppose you multiplied each of the original coordinates by a scale factor of 2. Complete the table below and respond to the questions that follow.

Original Figure		Coordinates of Original Figure Doubled $(2 \cdot x, 2 \cdot y)$	Actual coordinates of image Dilated by Scale Factor of 2 with Center Of Dilation at P(8, 2)
Point	Coordinates		
A	(2, 6)	(4, 12)	(-4, 10)
B	(8, 7)	(16, 14)	(8, 12)
C	(4, 4)	(8, 8)	(0, 6)

- Notice that multiplying the coordinates of A(2, 6) by 2 gives (4, 12). How different is the x coordinate from the actual coordinate? What about the x coordinates for the other points? How different are they from the actual coordinates?
All x -coordinates from the image have a difference of 8 from the original.
- Notice that multiplying the coordinates of A(2, 6) by 2 gives (4, 12). How different is the y coordinate from the actual coordinate? What about the y coordinates for the other points? How different are they from the actual coordinates?
All y -coordinates from the image have a difference of 2 from the original.

The Extended Field of Operator Theory Michael A. Dritschel, 2007-06-25 This volume contains contributions originating from the International Workshop on Operator Theory and Its Applications IWOTA held in Newcastle upon Tyne in July 2004. The articles expertly cover a broad range of material at the cutting edge of functional analysis and its applications. The works are written by world authorities in their specialities.

Advances in Quantum Dynamics Geoffrey L. Price, 2003 This volume contains the proceedings of the conference on Advances in Quantum Dynamics. The purpose of the conference was to assess the current state of knowledge and to outline future research directions of quantum dynamical semigroups on von Neumann algebras. Since the appearance of the landmark papers by F. Murray and J. von Neumann, von Neumann algebras have been used as a mathematical model in the study of time evolution of quantum mechanical systems. Following the work of M. H. Stone, von Neumann and others on the structure of one parameter groups of unitary transformations, many researchers have made fundamental contributions to the understanding of time reversible dynamical systems. This book deals with the mathematics of time irreversible systems also called dissipative systems. The time parameter is the half line and the transformations are now endomorphisms as opposed to automorphisms. For over a decade, W. B. Arveson and R. T. Powers have pioneered the effort to understand the structure of irreversible quantum dynamical systems on von Neumann algebras. Their papers in this volume serve as an excellent introduction to the theory. Also included are contributions in other areas which have had an impact on the theory such as Brownian motion, dilation theory, quantum probability and free probability. The volume is suitable for graduate students and research mathematicians interested in the dynamics of quantum systems and corresponding topics in the theory of operator algebras.

Keys to the Trematoda David Ian Gibson, Arlene Jones, Rodney Alan Bray, 2002 This text in three volumes presents a detailed revision of the systematics and taxonomy of the platyhelminth class Trematoda, subclasses Aspidogastrea and Digenea. These parasites attack animals and humans and have a great economic impact.

Fundamentals of Physics, Extended David Halliday, Robert Resnick, Jearl Walker, 2021-10-12 Fundamentals of Physics 12th Edition guides students through the process of learning how to effectively read scientific material, identify fundamental concepts, reason through scientific questions and solve quantitative problems. The 12th edition includes a renewed focus on several contemporary areas of research to help challenge students to recognize how scientific and engineering applications are fundamental to the world's clockwork. A wide array of tools will support students' active learning as they work through and engage in this course. Fundamentals of Physics 12e is built to be a learning center with practice opportunities, interactive challenges, activities, simulations and videos. Practice and assessment questions are available with immediate feedback and detailed solutions to ensure that students understand the problem solving processes behind key concepts and understand their mistakes while working through problems.

Harmonic Analysis at Mount Holyoke

William Beckner, 2003 This volume contains the proceedings of the conference on harmonic analysis and related areas The conference provided an opportunity for researchers and students to exchange ideas and report on progress in this large and central field of modern mathematics The volume is suitable for graduate students and research mathematicians interested in harmonic analysis and related areas Quantum Independent Increment Processes I David Applebaum, B.V. Rajarama

Bhat, Johan Kustermans, J. Martin Lindsay, 2005-02-18 This volume is the first of two volumes containing the revised and completed notes lectures given at the school Quantum Independent Increment Processes Structure and Applications to Physics This school was held at the Alfried Krupp Wissenschaftskolleg in Greifswald during the period March 9 22 2003 and supported by the Volkswagen Foundation The school gave an introduction to current research on quantum independent increment processes aimed at graduate students and non specialists working in classical and quantum probability operator algebras and mathematical physics The present first volume contains the following lectures L vy Processes in Euclidean Spaces and Groups by David Applebaum Locally Compact Quantum Groups by Johan Kustermans Quantum Stochastic Analysis by J Martin Lindsay and Dilations Cocycles and Product Systems by B V Rajarama Bhat Operator-Valued Measures, Dilations, and the Theory of Frames Deguang Han, David R. Larson, Bei Liu, Rui Liu, 2014-04-07 The authors develop elements of a general dilation theory for operator valued measures Hilbert space operator valued measures are closely related to bounded linear maps on abelian von Neumann algebras and some of their results include new dilation results for bounded linear maps that are not necessarily completely bounded and from domain algebras that are not necessarily abelian In the non cb case the dilation space often needs to be a Banach space They give applications to both the discrete and the continuous frame theory There are natural associations between the theory of frames including continuous frames and framings the theory of operator valued measures on sigma algebras of sets and the theory of continuous linear maps between algebras In this connection frame theory itself is identified with the special case in which the domain algebra for the maps is an abelian von Neumann algebra and the map is normal i e ultraweakly or weakly or w continuous

As a foundational work in the field, this book equips students, professionals, and environmental managers with the necessary knowledge to understand and manage aquatic insects, ensuring the health and vitality of aquatic ecosystems. This title was originally published in 1956. *Aquatic Insects of California with Keys to North American Genera and California Species* is an essential reference for scientists, researchers, and enthusiasts working in the study of aquatic insects and their role in freshwater ecosystems. This comprehensive *Mathematical Morphology and Its Applications to Signal and Image Processing* Jón Atli Benediktsson, Jocelyn Chanussot, Laurent Najman, Hugues Talbot, 2015-05-15. This book contains the thoroughly refereed proceedings of the 12th International Symposium on Mathematical Morphology ISMM 2015 held in Reykjavik, Iceland, in May 2015. The 62 revised full papers were carefully reviewed and selected from 72 submissions. This book is devoted to the ubiquity of the Schur parameters. A dilation theoretic view leads to a unified perspective on several topics where Schur parameters appear as basic cells. Together with the transmission line, their physical counterpart, they appear in scattering theory, in modeling, prediction, and filtering of nonstationary processes in signal processing, geophysics, and system theory. Modeling problems are considered for certain classes of operators, interpolation problems, determinantal formulae, as well as connections with certain classes of graphs where again the Schur parameters could play a role. Some general algorithms that explore the transmission line are also presented in this book. As a whole, the text is self-contained and it is addressed to people interested in the previously mentioned topics or connections between them. **Quantum Systems under Gravitational Time Dilation** Magdalena Zych, 2017-02-06. This thesis introduces a new theoretical tool to explore the notion of time and temporal order in quantum mechanics: the relativistic quantum clock framework. It proposes novel thought experiments showing that proper time can display quantum features, e.g., when a clock runs, different proper times are in superposition. The resulting new physical effects can be tested in near future laboratory experiments with atoms, molecules, and photons as clocks. The notion of time holds the key to the regime where quantum theory and general relativity overlap, which has not been directly tested yet and remains largely unexplored by the theory. The framework also applies to scenarios in which causal relations between events become non-classical and which were previously considered impossible to address without refuting quantum theory. The relativistic quantum clock framework offers new insights into the foundations of quantum theory and general relativity. Functional
