Discovering Mathematics with Maple R.J. Stroeker,J.F. Kaashoek,2012-12-06 his book grew out of the wish to let students of econometrics get acquainted T with the powerful techniques of computer algebra at an early stage in their curriculum As no textbook available at the time met our requirements as to content and presentation we had no other choice than to write our own course material The try out on a group of 80 first year students was not without success and after adding some necessary modifications the same material was presented to a new group of students of similar size the year after Some more adjustments were made and the final result now lies before you Working with computer algebra packages like Derive Mathematica and Maple over many years convinced us of the favourable prospects of computer algebra as a means of improving the student s understanding of the difficult concepts on which mathematical techniques are often based Moreover advanced mathematical ed ucation be it for mathematics itself or for mathematical statistics operations research and other branches of applied mathematics can greatly profit from the large amount of non trivial mathematical knowledge that is stored in a computer algebra system Admittedly the fact remains that many a tough mathematical problem such as solving a complicated non linear system or obtaining a finite ex pression for a multiple parameter integral can not easily be handled by computer algebra either if at all

Experiencing Mathematics James R. Breunlin,Timothy A. Kasper,Michelle Kolet,2006 Experiencing Mathematics Activities to Engage the High School Student is the result of the collaborative effort of nine Adolescent Young Adult AYA National Board Certified Teachers in mathematics This teacher edition is a compilation of successful activities that prompt high school students to explore conjecture and reflect on their

mathematical adventures thus experience mathematics The relevant nature of the activities will motivate students to pursue their investigations with vigor and take the intellectual risk necessary to construct knowledge and improve problem solving competence This edition will educate teachers regarding tenets of cognitive science motivation theory and the NCTM NBCT standards It will dispel the myth that the crowded curriculum does not have room for such activities and in fact will convince teachers that using such activities increases teacher and student motivation and achievement The resources provide detailed instructions for each activity along with student prompts and reflective questions for the teacher

3D Printing in Mathematics Maria Trnkova, Andrew Yarmola, 2023-11-07 This volume is based on lectures delivered at the 2022 AMS Short Course 3D Printing Challenges and Applications held virtually from January 3-4, 2022 Access to 3D printing facilities is quickly becoming ubiquitous across college campuses However while equipment training is readily available the process of taking a mathematical idea and making it into a printable model presents a big hurdle for most mathematicians Additionally there are still many open questions around what objects are possible to print how to design algorithms for doing so and what kinds of geometries have desired kinematic properties This volume is focused on the process and applications of 3D printing for mathematical education research and visualization alongside a discussion of the challenges and open mathematical problems that arise in the design and algorithmic aspects of 3D printing The articles in this volume are focused on two main topics The first is to make a bridge between mathematical ideas and 3D visualization The second is to describe methods and techniques for including 3D printing in mathematical education at different levels from pedagogy to research and from demonstrations to individual projects We hope to establish the groundwork for engaged academic discourse on the intersections between mathematics 3D printing and education
