Answers to Review Questions

1. An entity is a person, place, thing, or event.
2. An attribute is a property of an entity.
3. A relationship is an association between tables (entities). A one-to-many relationship between two tables is a relationship in which each row in the first table can be associated with many rows in the second table, but each row in the second table is associated with only one row in the first table.
4. A repeating group is multiple entries in a single location in a table.
5. A relation is a two-dimensional table in which the entries in the table are single-valued (each location in the table contains a single entry), each column has a distinct name (or attribute name), all values in a column are values of the same attribute, the order of the rows and columns is immaterial, and each row contains unique values.

6. A relational database is a collection of relations.

7. For each table, you write the name of the table and then within parentheses list all of the columns in the table. Underline the primary keys.

```
BRANCH (BRANCH_NUM, BRANCH_NAME, BRANCH_LOCATION, NON_EMPLOYEES)
PUBLISHER (PUBLISHER_CODE, PUBLISHER_NAME, CITY)
AUTHOR (AUTHOR_NUM, AUTHOR_LAST, AUTHOR_FIRST)
BOOK (BOOK_CODE, TITLE, PUBLISHER_CODE, TYPE, PRICE, PAPERBACK)
WROTE (BOOK_CODE, AUTHOR_NUM, SEQUENCE)
INVENTORY (BOOK_CODE, BRANCH_NUM, ON_HAND)
```

8. To qualify the name of a field, indicate the table in which the field appears. You do this by preceding the name of the field with the name of the table and a period.
9. A column (attribute), B, is functionally dependent on another column, A (or possibly a collection of columns), if at any point in time a value for A determines a single value for B.
10. Column A (or a collection of columns) is the primary key for a table if (1) All columns in the table are functionally dependent on A and (2) No subcollection of the columns in A (assuming A is a collection of columns and not just a single column) also has property 1. The primary key of the BRANCH table is the BRANCH_NUM column. The primary key of the PUBLISHER table is the PUBLISHER_CODE column. The primary key of the AUTHOR table is the AUTHOR_NUM column. The primary key of the BOOK table is the BOOK_CODE column. The primary key of the WROTE table is the combination of the BOOK_CODE and AUTHOR_NUM.

Andreasen, 2002-10-14 This book constitutes the refereed proceedings of the 5th International Conference on Flexible Query Answering Systems FQAS 2002 held in Copenhagen Denmark in October 2002 The 29 revised full papers presented were carefully reviewed and selected for inclusion in the proceedings Among the fields covered are database management information retrieval domain modeling knowledge representation and ontologies knowledge discovery and data mining artificial intelligence classical and nonclassical logics computational linguistics natural language processing multimedia information systems and human computer interaction Stating the Obvious, and Other Database Writings C. J. Date, Some things seem so obvious that they don't need to be spelled out in detail Or do they In computing at least and probably in any discipline where accuracy and precision are important it can be quite dangerous just to assume that some given concept is obvious and indeed universally understood Serious mistakes can happen that way The first part of this book discusses features of the database field equality assignment naming where just such an assumption seems to have been made and it describes some of the unfortunate mistakes that have occurred as a consequence It also explains how and why the features in question aren't quite as obvious as they might seem and it offers some advice on how to work around the problems caused by assumptions to the contrary Other parts of the book also deal with database issues where devoting some preliminary effort to spelling out exactly what the issues in question entailed could have led to much better interfaces and much more carefully designed languages The issues discussed include redundancy and indeterminacy persistence encapsulation and decapsulation the ACID properties of transactions and types vs units of measure Finally the book also contains a detailed deconstruction of and response to various recent pronouncements from the database literature all of them having to do with relational technology Once again the opinions expressed in those pronouncements might seem obvious to some people to the writers at least presumably but the fact remains that they're misleading at best and in most cases just flat out wrong

determine clear search criteria The book examines theoretical and practical approaches to fuzziness in information systems based on statistical data related to territorial units Chapter 1 discusses the theory of fuzzy sets and fuzzy logic to enable readers to understand the information presented in the book Chapter 2 is devoted to flexible queries and includes issues like constructing fuzzy sets for query conditions and aggregation operators for commutative and non commutative conditions while Chapter 3 focuses on linguistic summaries Chapter 4 presents fuzzy logic control architecture adjusted specifically for the aims of business and governmental agencies and shows fuzzy rules and procedures for solving inference tasks Chapter 5 covers the fuzzification of classical relational databases with an emphasis on storing fuzzy data in classical relational databases in such a way that existing data and normal forms are not affected This book also examines practical aspects of user friendly interfaces for storing updating querying and summarizing Lastly Chapter 6 briefly discusses possible integration of fuzzy queries summarization and inference related to crisp and fuzzy databases The main target audience of the book is researchers and students working in the fields of data analysis database design and business intelligence As it does not go too deeply into the foundation and mathematical theory of fuzzy logic and relational algebra it is also of interest to advanced professionals developing tailored applications based on fuzzy sets
