Description

This VRA consists of a stone vegetation-free zone, a grass strip, a media filter storage reservoir filled with specialized media, and a conveyance system for flows leaving the reservoir. This conveyance system usually consists of a gravel-filled underdrain trench or a layer of crushed surfacing base course. The stone vegetation-free zone produces sheet flow, which is pretreated as it flows across the grass strip and is then captured by the storage reservoir, where it infiltrates into the subsoil or is discharged through the underdrain. This VRA is typically installed between the road surface and a ditch or other conveyance located downslope. While this approach shares many similarities to VRA 02 – Dispersion, its engineering design features allow it to be sited in more constrained areas and on steeper cross-slopes where dispersion would not be as viable.
