

1. If **concealed wiring is to be used**, feed the wires through the concealed wiring entry hole at one corner of the plate (surface wiring is mentioned in Step 5 below).
2. Install the mounting plate, with its case fitting pins pointing up (in this example, at the location selected as described in the control unit's installation instructions). Use the National screws supplied.
3. If **concealed wiring is to be used**, feed it through the slot in the case back but do not connect it to the terminal block yet. **Surface wiring** should enter via the thin "breakout" area provided in the case wall.
4. Attach the case back to the mounting plate by sliding the keyhole slots in the case back down onto the mounting plate's hooks. The locking tab will click as the case back locks in place.
5. Set the DIP switch (after the control has enrolled the transmitter's input ID) to the desired output code characteristic, as described in the table below.
