Proceedings of the Fourth International Conference on Signal and Image Processing 2012 (ICSIP 2012) Mohan S,S Suresh Kumar,2013-01-11 The proceedings includes cutting edge research articles from the Fourth International Conference on Signal and Image Processing ICSIP which is organised by Dr N G P Institute of Technology Kalapatti Coimbatore The Conference provides academia and industry to discuss and present the latest technological advances and research results in the fields of theoretical experimental and application of signal image and video processing The book provides latest and most informative content from engineers and scientists in signal image and video processing from around the world which will benefit the future research community to work in a more cohesive and collaborative way Current Challenges in Providing Early Warning of Harmful Algal and Microbiological Risk to Aquaculture Marcos Mateus,Joe Silke,Keith Davidson,Patricia Neira Del Río,2022-09-01 **Biodiversity of Marine Microbes** Savvas Genitsaris,2021-08-31 The book entitled Biodiversity of Marine Microbes aims at highlighting the significance of marine microbes as primary producers their contribution in complex ecological processes and their roles in biogeochemical cycles and ecosystem functioning The book includes five research papers covering the diversity and composition of marine microbial communities representing all three domains of life in various marine environments including coastal eutrophic areas ice waters and lagoons One paper examines the diversity and succession of bacterial and archaeal communities from coastal waters in mesocosm experiments The combination of classical tools with novel technological advances implemented in the methods of the papers offered an opportunity to answer fundamental questions and shed light on the complex and diverse life of marine microbes *Male Reproduction and Oxidative Stress, volume II* Shun Bai,Asim Ali ,Weibin Bai,2025-10-30 Given the success of Research Topic Male Reproduction and Oxidative Stress and the rapidly evolving subject area we are pleased to announce the launch of Volume II Infertility is defined as the failure to conceive with regular sexual intercourse after at least 1 year Collectively primary infertility inability to conceive after one year and secondary infertility infertility for one year after having conceived at least once before affect 10% 15% of couples globally and male factors contribute to approximately 50% of cases Both extrinsic factors age weight body composition heat exposure smoking drinking environmental pollutant exposure medical interventions and chemotherapeutic exposure and intrinsic factors cell apoptosis varicocele metabolic syndrome inflammation and male gland infection could induce oxidative stress OS which can lead to poor semen quality and male factor infertility Poor lifestyles including heavy drinking and smoking increased BMI and exposure to air toxics are all associated with increased cellular OS which can result in increased production of reactive oxygen species ROS In addition to lifestyles the level of sperm ROS also increases with age High levels of sperm ROS cause abnormal semen parameters in particular sperm concentration motility and DNA fragmentation Accordingly cellular OS should be considered in the routine clinical application of male infertility Anthocyanins which belong to one of the six subgroups of flavonoids have high antioxidant

properties and may be positively associated with semen quality and male fertility. Considering the emerging importance of intracellular ROS homeostasis in the development of gametes, anthocyanins have been studied in reproductive development owing to the high sensitivity of anthocyanins to oxidative stress. Until now, several anthocyanins in fruits and other plant-derived foods can confer protection in spermatogenesis disorders caused by reproductive toxic compounds, implying the importance of the antioxidants in maintaining normal testicular function and male fertility. This Research Topic aims to provide an up-to-date understanding of the intrinsic and extrinsic factors that are associated with oxidative stress in male reproduction. We welcome submissions of Original Research, Reviews, and Case Reports on the following sub-topics, including but not limited to: Oxidative stress and sperm function; e.g., sperm DNA fragmentation, mitochondrial membrane potential, MMP, ROS. Oxidative stress and sexual dysfunction. The role of lifestyle factors and environmental pollutants in male infertility. The impact of nutrients and antioxidants on male fertility. The association of oxidative stress in metabolic syndrome-related male infertility. Role of oxidative stress in varicocele and male gland infection. Inflammation and male reproduction.

Current Advances in Precision Microscopy Rupert Ecker, Quan Nguyen, Jyotsna Batra, Felicitas Mungenast, 2025-03-04

The combination of multiplexing staining methods, new microscopic techniques, advanced computing power, and artificial intelligence opens new avenues in research and clinics for automated analysis of tissues, single cells, as well as subcellular components and even genetic parameters. A combination of biomarkers on protein, mRNA, and DNA levels supports the development of novel analytical diagnostic approaches under the scope of precision medicine. In this Research Topic, we call for papers focusing on advanced light and, in particular, fluorescence microscopy and image tissue cytometry, applying methods of Machine and Deep Learning, as well as the combination thereof in automated analysis systems.

Immunobiotics: Interactions of Beneficial Microbes with the Immune System Julio Villena, Haruki Kitazawa, 2018-01-26

The term immunobiotics has been proposed to define microbial strains able to beneficially regulate the mucosal immune system. Research in immunobiotics has significantly evolved as researchers employed cutting-edge technologies to investigate the complex interactions of these beneficial microorganisms with the immune system. During the last decade, our understanding of immunobiotics' host interaction was profoundly transformed by the discovery of microbial molecules and host receptors involved in the modulation of the gut-associated immune system, as well as the systemic and distant mucosal immune systems. In recent years, there has been a substantial increase in the number of reports describing the beneficial effects of immunobiotics in diseases such as intestinal and respiratory infections, allergy, inflammatory bowel disease, obesity, immunosuppression, and several other immune-mediated conditions. Evidence is also emerging of immunobiotics-related molecules with immunomodulatory functions leading to the production of pharmabiotics, which may positively influence human or animal health. Therefore, research in immunobiotics continues to contribute not only

to food but also medical and pharmaceutical fields The compilation of research articles included in this ebook should help reader to have an overview of the recent advances in immunobiotics Innovations in Imaging for Early Diagnosis and Monitoring for Patients With Gastrointestinal Cancer Stephen J. Pandol,Debiao Li,Temel Tirkes,2022-04-25 **Light in Forensic Science** Giorgia Miolo,Jacqueline L Stair,Mire Zloh,2018-04-16 The identification and quantification of material present and collected at a crime scene are critical requirements in investigative analyses Forensic analysts use a variety of tools and techniques to achieve this many of which use light Light is not always the forensic analyst s friend however as light can degrade samples and alter results This book details the analysis of a range of molecular systems by light based techniques relevant to forensic science as well as the negative effects of light in the degradation of forensic evidence such as the breakage of DNA linkages during DNA profiling The introductory chapters explain how chemiluminescence and fluorescence can be used to visualise samples and the advantages and limitations of available technologies They also discuss the limitations of our knowledge about how light could alter the physical nature of materials for example by breaking DNA linkages during DNA profiling or by modifying molecular structures of polymers and illicit drugs The book then explains how to detect analyse and interpret evidence from materials such as illicit drugs agents of bioterrorism and textiles using light based techniques from microscopy to surface enhanced Raman spectroscopy Edited by active photobiological and forensic scientists this book will be of interest to students and researchers in the fields of photochemistry photobiology toxicology and forensic science **The British Journal of Photography** ,1986
