Mechanics and Computation** A. Zingoni,2001-03-16 Following on from the International Conference on Structural

Engineering Mechanics and Computation held in Cape Town in April 2001 this book contains the Proceedings in two volumes There are over 170 papers written by Authors from around 40 countries worldwide The contributions include 6 Keynote Papers and 12 Special Invited Papers In line with the aims of the SEMC 2001 International Conference and as may be seen from the List of Contents the papers cover a wide range of topics under a variety of themes There is a healthy balance between papers of a theoretical nature concerned with various aspects of structural mechanics and computational issues and those of a more practical nature addressing issues of design safety and construction As the contributions in these Proceedings show new and more efficient methods of structural analysis and numerical computation are being explored all the time while exciting structural materials such as glass have recently come onto the scene Research interest in the repair and rehabilitation of existing infrastructure continues to grow particularly in Europe and North America while the challenges to protect human life and property against the effects of fire earthquakes and other hazards are being addressed through the development of more appropriate design methods for buildings bridges and other engineering structures

Mechanics of Engineering Materials C. S. Desai, R. H. Gallagher, *Mechanics of Engineering Materials* Bowes and Others, 1968 **The Mechanical Behaviour of Engineering Materials** W. D. Biggs, 2013-10-22 The Mechanical Behaviour of Engineering Materials aims to relate properties and structure and to provide a theoretical basis upon which to extrapolate when conditions or materials outside previous experience arise The present text refers primarily to metals and alloys other non crystalline solids are treated rather less fully This is largely dictated by the state of knowledge at the present time for although there is a large mass of data concerning the properties of non metallic materials much of this is empirical and a full explanation is made difficult by the complexities of an irregular initial structure The book can be divided into the three sections covering constitution properties and significance of test data Separate chapters discuss properties such as heterogeneity elasticity plasticity and fracture Subsequent chapters deal with tensile and hardness tests creep fatigue and impact tests and the selection of engineering materials Throughout the text the author has endeavored to confine the discussion to those aspects of materials science which appear to be reasonably well understood at the present time
