Individual-based Modeling and Ecology Volker Grimm, Steven F. Railsback, 2013-11-28 Individual based models are an exciting and widely used new tool for ecology These computational models allow scientists to explore the mechanisms through which population and ecosystem ecology arises from how individuals interact with each other and their environment This book provides the first in depth treatment of individual based modeling and its use to develop theoretical understanding of how ecological systems work an approach the authors call individual based ecology Grimm and Railsback start with a general primer on modeling how to design models that are as simple as possible while still allowing specific problems to be solved and how to move efficiently through a cycle of pattern oriented model design implementation and analysis Next they address the problems of theory and conceptual framework for individual based ecology What is theory That is how do we develop reusable models of how system dynamics arise from characteristics of individuals What conceptual framework do we use when the classical differential equation framework no longer applies An extensive review illustrates the ecological problems that have been addressed with individual based models The authors then identify how the mechanics of building and using individual based models differ from those of traditional science and provide guidance on formulating programming and analyzing models This book will be helpful to ecologists interested in modeling and to other scientists interested in agent based modeling

Correlated neuronal activity and its relationship to coding, dynamics and network architecture Tatjana

Tchumatchenko, Ruben Moreno-Bote, 2014-12-03 Correlated activity in populations of neurons has been observed in many brain regions and plays a central role in cortical coding attention and network dynamics Accurately quantifying neuronal correlations presents several difficulties For example despite recent advances in multicellular recording techniques the number of neurons from which spiking activity can be simultaneously recorded remains orders magnitude smaller than the size of local networks In addition there is a lack of consensus on the distribution of pairwise spike cross correlations obtained in extracellular multi unit recordings These challenges highlight the need for theoretical and computational approaches to understand how correlations emerge and to decipher their functional role in the brain The Software Encyclopedia ,1988

Biology/science Materials Carolina Biological Supply Company, 1991 *Content Analysis* Klaus Krippendorff, 2013 Since the publication of the First Edition of Content Analysis An Introduction to Its Methodology the textual fabric in which contemporary society functions has undergone a radical transformation namely the ongoing information revolution Two decades ago content analysis was largely known in journalism and communication research and to a lesser extent in the social and psychological sciences Today content analysis has become an efficient alternative to public opinion research a method of tracking markets political leanings and emerging ideas a way to settle legal disputes and an approach to explore individual human minds The Third Edition of Content Analysis remains the definitive sourcebook of the history and core principles of content analysis as well as an essential resource for present and future studies The book introduces readers to ways of analyzing meaningful matter such as texts images voices that is data whose physical manifestations are secondary to the meanings that a particular population of people brings to them Organized into three parts the book examines the conceptual and methodological aspects of content analysis and also traces several paths through content analysis protocols The author has completely revised and updated the Third Edition integrating new information on computer aided text analysis and social media The book also includes a practical guide that incorporates experiences in teaching and how to advise academic and commercial researchers In addition Krippendorff clarifies the epistemology and logic of content analysis as well as the methods for achieving its aims *Entangled Sensemaking at Sea* Jason Good, 2020-09-01 Sustainable commercial fishing species conservation and bycatch are contentious topics Great emphasis has been placed on the sustainable sourcing of particular species that we buy at the store and order in restaurants but how can we trust that the fish on our plates from a system wide perspective have been appropriately sourced Even in what are commonly considered to be

the best managed fisheries in the world i.e Alaskan fisheries thousands of tons of fish are wasted each year in the interest of providing certain species in certain ways to certain people at certain prices Are the management practices and regulations that we think are helping actually having the desired outcomes in terms of the effective use of natural resources This book presents a framework that can enhance our understanding research and regulation of frontline organizing processes in commercial fisheries which may be generalized to other resource extraction industries It enables readers to better grasp and respond to the need to develop practices and regulations that involve effective use of all natural resources rather than just a chosen few The book is especially important to researchers and practitioners active in the fishing industry and natural resource managers and regulators interested in understanding and improving their management systems It is also highly relevant to organization and management researchers interested in coupled human and natural systems ecological sensemaking the role of quantum mechanics in organizational phenomena sociomateriality and sustainability The book uses the real world case of an Alaskan fishing fleet to explore how the commercial fishing industry which includes businesses management agencies regulatory bodies and markets among others entangles itself with natural phenomena in order to extract resources from them After gaining a better understanding of these processes can we see how they can be improved especially through changes to regulatory management systems in order to foster not only more sustainable but also less wasteful these two goals are not necessarily interdependent in today's regulatory management systems natural resource extraction and use Such an understanding requires exploring how regulations natural phenomena human sensemaking processes and market forces entangle at sea to materialize the fish that make their way to our plates as well as those that importantly do not
