

Name: _____

Date: _____

Student Exploration: Plants and Snails

Vocabulary: bromthymol blue (BTB), indicator, interdependence

Prior Knowledge Questions (Do these BEFORE using the Gizmo.)

1. What important gas do we take in when we breathe?

2. Why don't we run out of the important gases that we need to stay alive?

Background Information

In this activity, you will create and monitor closed ecosystems with aquatic snails and elodea plants. The bromthymol blue (BTB) indicator in the test tubes will show carbon dioxide concentrations by changing color. If there is a lot of carbon dioxide, the liquid turns yellow. If there is little carbon dioxide, the liquid turns blue. Because plants convert carbon dioxide to oxygen, you can infer that low carbon dioxide levels correspond to high oxygen levels.

Gizmo Warm-up

In the *Plants and Snails* Gizmo™, each of the test tubes contains water and a small amount of **bromthymol blue** (BTB). BTB is a chemical **indicator**. An indicator changes color when the chemicals in the water change.

1. With the lights set to **on**, drag a snail into one test tube and a plant into another. Press **Play** (▶). After 24 hours, what is the color is the tube with the snail in it? _____ What color is the tube with the plant in it? _____

2. Select **Show oxygen and CO₂ values**. Place the **O₂/CO₂ probe** in each tube. The probe will show you the levels of two gases, oxygen (O₂) and carbon dioxide (CO₂), in the tubes. We call these amounts the *gas levels*.

- A. When the water turns blue, which gas is most common? _____
