Cognitive Approaches to Early Modern Spanish Literature is the first anthology exploring human cognition and literature in the context of early modern Spanish culture. It includes the leading voices in the field along with the main themes and directions that this important area of study has been producing. The book begins with an overview of the cognitive literary studies research that has been taking place within early modern Spanish studies over the last fifteen years. Next, it traces the creation of self in the context of the novel, focusing on Cervantes's *Don Quixote* in relation to the notions of embodiment and autopoiesis, as well as the faculties of memory and imagination as understood in early modernity. It continues to explore the concept of embodiment, showing its relevance to delve into the mechanics of the interaction between actors and audience, both in the jongleuresque and the comedia traditions. It then centers on cognitive theories of perception, the psychology of immersion in fictional worlds, and early modern and modern day notions of intentionality to discuss the role of perceiving and understanding others in performance. *Don Quixote* and courtly conduct manuals. The last section focuses on the affective dimension of audience/performer interactions in the theatrical space of the Spanish corrales, and how emotion and empathy can inform new approaches to presenting *Las Casas*'s work in the literature classroom. The volume closes with an afterword offering strategies to design a course on mind and literature in early modernity.

Creation Adam Rutherford,2013-06-13

What is life Humans have been asking this question for thou sands of years But as technology has advanced and our understanding of biology has deepened the answer has evolved For decades scientists have been exploring the limits of nature by modifying and manipulating DNA cells and whole organisms to create new ones that could never have existed on their own In Creation science writer Adam Rutherford explains how we are now radically exceeding the boundaries of evolution and engineering entirely novel creatures from goats that produce spider silk in their milk to bacteria that excrete diesel to genetic circuits that identify and destroy cancer cells As strange as some of these creations may sound this new synthetic biology is helping scientists develop radical solutions to some of the world s most pressing crises from food shortages to pandemic disease to climate change and is paving the way for inventions once relegated to science fiction

Meanwhile these advances are shedding new light on the biggest mystery of all how did life begin We know that every creature on Earth came from a single cell sparked into existence four billion years ago And as we come closer and closer to understanding the ancient root that connects all living things we may finally be able to achieve a second genesis the creation of new life where none existed before Creation takes us on a journey four billion years in the making from the very first cell to the ground breaking biological inventions that will shape the future of our planet **A Dictionary of the Space Age**
