to biased decision making such as transparency disclosing conflicts or exclusion avoiding conflicts do not directly solve the underlying problem of bias and may have unintended consequences Robertson and Kesselheim bring together a renowned group of interdisciplinary scholars to consider another way to reduce the risk of biased decision making blinding What are the advantages and limitations of blinding How can we quantify the biases in unblinded research Can we develop new ways to blind decision makers What are the ethical problems with withholding information from decision makers in the course of blinding How can blinding be adapted to legal and scientific procedures and in institutions not previously open to this approach Fundamentally these sorts of questions about who needs to know what open new doors of inquiry for the design of scientific research studies regulatory institutions and courts The volume surveys the theory practice and future of blinding drawing upon leading authors with a diverse range of methodologies and areas of expertise including forensic sciences medicine law philosophy economics psychology sociology and statistics Introduces readers to the primary policy issue this book seeks to address biased decision making Provides a focus on blinding as a solution to bias which has applicability in many domains Traces the development of blinding as a solution to bias and explores the different ways blinding has been employed Includes case studies to explore particular uses of blinding for statisticians radiologists and fingerprint examiners and whether the jurors and judges who rely upon them will value and understand blinding
