Forests Environmental Issues Global Perspectives:

Forests James Fargo Balliett, 2014-12-18 Forests are considered the lungs of the planet as they consume and store carbon dioxide and produce oxygen. These biomes, defined as ecological communities dominated by long-lived woody vegetation, historically have provided an economic foundation for growing nations, supplying wood for buildings, firewood for fuel, and land for expanding cities and farms. For centuries, industrial nations in Europe and the United States have relied on large tracts of forestland for economic prosperity. The research presented in this book reveals that population pressures are causing considerable environmental distress in even the most remote forest areas. Three detailed case studies are presented. The first provides an assessment of illegal logging deep in South America's Amazon rain forest, a region closely tied to food and product demands thousands of miles away. The second examines the effect of increased hunting in Central Africa's Congo forest, which threatens wildlife, especially mammal species with slower reproductive cycles. Finally, the third describes encroachment on old-growth tropical forests on the Southern Pacific island of Borneo, which today is better managed thanks to the collective planning and conservation efforts of the governments of Brunei, Indonesia, and Malaysia. *Governmental Response to Environmental Challenges in Global Perspective* Joseph G. Jabbar, O. P. Dwivedi, 1998 In our drive to improve human standards of living, we have paradoxically paid scant attention to the need for clean air and water, the impact of acid rain on agriculture, lakes, and rivers, the effect of pollutants on the ozone layer, the safe disposal of hazardous wastes, and the relationship between population growth and the environment. It seems that every time governments are faced with an apparent choice between economic development and the protection of the environment, priority is always given to the former. Short-term plans dictated by canons of political survival and expediency always seem to take precedence over long-term strategies with politicians and decision makers deftly relegating environmental concerns to the realm of rhetoric. This book is an effort to better understand the problems faced by our global ecosystems. It is also the result of the authors' deep commitment to urge both citizens and their leaders the world over to work together for a better protection of the environment so that our planet may be saved for the present and for future generations. **Urban forests: a global**

perspective Borelli, S., Conigliaro, M., Di Cagno, F., 2023-10-16 Urban forestry is not a one-size-fits-all solution; each city and region, with its own unique set of challenges and opportunities, requires tailored strategies. In recognition of the diversity and distinctiveness of urban forestry issues and their potential for mitigating environmental and socioeconomic inequality across the globe, FAO has asked experts around the world to share their views on how urban forests and trees are perceived and managed in their respective geographical areas, bringing together a broad range of regional perspectives. The primary goal of this publication is to provide a comprehensive overview of the current state of urban forestry worldwide. By showcasing the regional perspectives, insights, experiences, and case studies in urban and peri-urban forestry, UPF we hope to inspire individuals, communities, and policymakers to reimagine their relationships with urban green spaces. *Forests, a Global*

Perspective Shyamal K. Majumdar, Eugene Willard Miller, Fred J. Brenner, 1996 Thirty two contributions in English **World Forests, Society and Environment** Matti Palo, J. Uusivuori, 2012-12-06 This book addresses current global and regional issues concerning the world's forests, societies and the environment from an independent and non governmental point of view. A main message is that cooperation on a global scale is not only commendable but essential if solutions to the problems facing the world's forests are to be found. To achieve this, modern science needs to find a clearer picture of relationships between forests, human activity and the environment and of the consequences of environmental change for the ability of societies to survive. Part I Editorial Perspectives is analyzing the ongoing globalization processes of forests, societies and the environment. Part II Society and Environment reviews worldwide trends with significance for the future of forests and forestry. While the trends are influenced by forest sector issues, that sector is influenced to a much larger extent by external factors such as demography, urbanization or technological development. Part III Importance of Forests looks at the value of the goods and services of forests, tangible and intangible, market and non market, and concludes that failure to recognize their full value is one of the crucial impediments to sustainable development. In Part IV Global Forum, scientists take up global forestry themes: deforestation, trade and the environment, climate change, biodiversity, with the aim of stimulating wider discussion. Part V Regional Forum looks at major themes of particular relevance to Africa, Asia, Pacific, Latin America, North America and Europe, such as farm and agroforestry, corruption and concessions, urban forestry and environmental conflicts. Part VI introduces the special theme forest sectors in transition economies. Teams of scientists from Russia and China focus on the implications of the transition from plan to market economy, illuminating both the very different nature of the forest sector in the two countries and the different transition paths that they have adopted. In the past millennium, the entire world has been discovered. In the past half century, the contribution of forests to the economy worldwide has been perceived, while only recently have their societal and environmental benefits been globally recognized. Globalization is a demanding process requiring knowledge and information. This book offers knowledge, facts and information, but also values from diverse human and cultural perspectives about world forests, society and environment to help us towards equity in our use of the global forest, to create a clearer vision on a unassailable *Global Concerns for Forest Resource Utilization* Atsushi Yoshimoto, Kiyoshi Yukutake, 2013-11-11 This book is a collection of papers presented at the international symposium on forest sector analysis held in Miyazaki, Japan, in 1998. It is structured with three themes: understanding global forest sector issues, discussing the contribution of modeling efforts to forest sector analysis, and discussing the role of Japanese forest policy in a global sense. The most important features are the case studies using various types of forest sector models. From a modeling perspective, changes in modeling efforts include more detail of spatial and multiple market levels, intergenerational welfare concerns, non market valuation issues, and explicit treatment of the uncertainty inherent in both the policy process and in the biophysical systems. The reader of this book will benefit not only from presentation of forest utilization issues in different nations, but also

from the interrelatedness of the theory and application of forest sector modeling

Global Perspectives on Sustainable Forest Management Dr. Clement A. Okia, 2012-04-25 This book is dedicated to global perspectives on sustainable forest management It focuses on a need to move away from purely protective management of forests to innovative approaches for multiple use and management of forest resources The book is divided into two sections the first section with thirteen chapters deals with the forest management aspects while the second section with five chapters is dedicated to forest utilization This book will fill the existing gaps in the knowledge about emerging perspectives on sustainable forest management It will be an interesting and helpful resource to managers specialists and students in the field of forestry and natural resources management

Seeing the Forest and the Trees Emilio F. Moran, Elinor Ostrom, 2005 *Seeing the Forest and the Trees* examines changes in land cover land use in forested regions as major contributors to global environmental change

Global Perspectives in the Geography Curriculum Alex Standish, 2008-10-07 For geographers across the globe this book provides the arguments for a return to the teaching of geography and why they should reject the politicisation of the subject by education policy makers and politicians Standish's careful critique shows the necessity of a depoliticised geography curriculum the irony of which would be that it would ensure that every child could point to Iraq Iran and Afghanistan on a map Prof Dennis Hayes Oxford Brookes University UK A prescient and critical analysis of the changing face of geography teaching This book deserves to be widely read and debated Alex Standish's book puts current trends in geography teaching in historical and critical context It comprises a forthright and timely defence of geographical education for its own sake Dr Jim Butcher FRSA Department of Sport Science Tourism and Leisure Canterbury Christ Church University Since the early 1990s educational policy makers and some subject leaders have

been seeking to fundamentally change the teaching of geography in UK and US schools from a subject which encourages students to explore spatial concepts ideas and skills to a more ethics based subject concerned with the promotion of environmentalism cultural diversity and social justice In this book the new approach is critically examined within a historical and ideological context addressing a number of fundamental questions Should geography be used as a tool for the delivery of citizenship ideals How does this affect the intellectual and moral value of geographical education for young people If the state and teachers are taking more responsibility for the values attitudes and emotional responses of students how will they learn to develop these qualities for themselves If global perspectives shift the focus of education from learning about the outside world to learning about the self what is its vision of social progress and conception of social change This book advocates a return to liberal models of education arguing that the new approach to geography currently being promoted for schools fundamentally undermines the educational value of the subject and the freedom of young people to shape the world in which they live A vital resource for teachers and student teachers alike *Global Perspectives in the Geography Curriculum* makes a significant contribution to the growing debate about the future direction of the discipline itself
