

Step 3	Also consider other practical factors such as the structure, clarity and level of detail of the report, and whether it distorts the meaning of data. Where relevant to the requirement, look for positive as well as negative features of the report.
Step 4	Complete your answer plan and write up your answer. If you are asked to recommend improvements, make sure these relate specifically to the organisation in the scenario and its context, rather than being generic points.

Skills Checkpoint 3 in the APM BPP Workbook covers this technique in detail through application to an exam-standard question.

Skill 4: Critical analysis

The overall aim of the APM syllabus highlights that candidates should be able to exercise professional judgement in selecting and applying strategic management accounting techniques in different business contexts. As such, it is important to critically analyse the techniques that you study, for example to consider whether a certain technique would be appropriate for an organisation to use in a certain situation or not.

This skill requires you not only to understand the techniques, but also to appreciate their potential advantages or disadvantages. Just because an organisation in a question scenario is thinking about introducing a new technique does not necessarily mean that technique is appropriate for the organisation.

The skill of critical analysis can potentially be applied to any syllabus area in APM, and can be an important ingredient in developing a discussion that addresses the question scenario in a way that adds value.

A step-by-step technique for critical analysis is outlined below.

Step 1	Analyse the scenario and requirements. Ensure that you recognise the possibility that a critical approach to your analysis can be used to 'add value'.
Step 2	Plan your answer. Without adopting a hyper-critical approach, ensure you're your answer is balanced, in terms of identifying the potential benefits and limitations of techniques that are being used or recommended.
Step 3	As you write your answer, try wherever possible to apply your analysis to the scenario, instead of simply writing about criticisms (or benefits) in generic, technical terms.

Skills Checkpoint 4 in the APM BPP Workbook covers this technique in detail through application to an exam-standard question.

Skill 5: Addressing the scenario

All of the questions in the APM exam will be scenario-based.

It is **vital** that you use the information in the scenario to ensure that the discussion points that you are making in your answer are 'relevant'. The discussion parts of a question – applying your knowledge to the scenario – will normally account for the majority of the marks available.

Although you need to have a good underlying knowledge of a number of theories and frameworks, in the APM exam you will primarily be tested on your **ability to apply** your theoretical knowledge to the scenario in question, not your ability to simply recite it. The APM ACCA examining team often comment that candidates who repeat memorised material 'will probably score only between 20% and 30%...'.
