

Guide to Sheet Metal Fabrication

What Is Sheet Metal Fabrication?

Sheet metal fabrication is a broad term for any manufacturing technique that yields a metal component from flattened raw material. Many hot and cold-forming processes fall under this umbrella, including cutting, bending, punching, machining, and welding, as well as associated finishing and assembly methods.

Sheet metal fabrication techniques are highly versatile and are used for products ranging from car parts to consumer electronics. However, the exact metal process used differs from component to component, depending on the materials and component shapes. When you discuss your project with a knowledgeable sheet metal manufacturer like Metal Works of High Point, we can help identify the fabrication techniques best suited to your application.
