Manual Asymmetries, Handedness and Motor Performance Pamela Bryden, Andrea Helen Mason, Claudia L. R. Gonzalez, 2016-06-10 The performance of most tasks with one hand typically the right is a uniquely human characteristic Not only do people prefer to use one hand rather than the other but also they usually perform tasks faster and more accurately with this hand The study of manual asymmetries and what such performance differences between the two hands reveal about brain organization and motor function has been a topic of considerable research over the last several decades The aim of this Research Topic is to review and further explore the origins of manual asymmetries and their relationship to handedness unimanual and bimanual motor performance and brain function The articles included here involve original research conducted in humans or non human models species as well as theoretical perspectives review articles and meta analyses

The SAGES Manual of Hernia Surgery S. Scott Davis, Jr., Gregory Dakin, Andrew Bates, 2018-11-23 This edition of the SAGES Manual of Hernia Surgery aligns with the current version of the new SAGES University MASTERS Program Hernia Surgery pathway This manual serves as a curriculum for participants in the MASTERS Program as well as a modern text on hernia surgery for all learners Hernia surgery is one of the fastest developing fields in general surgery today There have been rapid advancements in hernia techniques in recent years making most prior texts on the subject obsolete These advancements involve significant evolution in both the techniques and strategies for hernia repairs as well as the tools used to achieve these means This text thoroughly addresses the multiple component separation techniques and options for locations of mesh repairs It also discusses the revolution of hernia repair being facilitated by robotic surgery which allows increased access to minimally invasive techniques for surgeons and thus increased access to minimally invasive surgical repairs for patients This manual will be a valuable resource for interested surgeons to understand the variety of potential approaches to individual hernias and to individually tailor the care of the hernia patient

Mapping Human Sensory-Motor Skills for Manipulation onto the Design and Control of Robots Matteo Bianchi, Gionata

Salvietti,2019-03-25 Humans are endowed with extraordinary sensory motor capabilities that enable a successful interaction with and exploration of the environment as is the case of human manipulation Understanding and modeling these capabilities represents an important topic not only for neuroscience but also for robotics in a mutual inspiration both to inform the design and control of artificial systems and at the same time to increase knowledge on the biological side Within this context synergies i e goal directed actions that constrain multi DOFs of the human body and can be defined at the kinematic muscular neural level have gained increasing attention as a general simplified approach to shape the development of simple and effective artificial devices The execution of such purposeful sensory motor primitives on the biological side leverages on the interplay of the sensory motor control at central and peripheral level and the interaction of the human body with the external world This interaction is particularly important considering the new concept of robotic soft manipulation i e soft adaptable yet robust robotic hands that can deform with the external environment to multiply their grasping and manipulation capabilities Under this regard a preeminent role is reserved to touch being that skin is our primary organ to shape our knowledge of the external world and hence to modify it in interaction with the efferent parts This Research Topic reports results on the mutual inspiration between neuroscience and robotics and on how it is possible to translate neuroscientific findings on human manipulation into engineering guidelines for simplified systems able to take full advantage from the interaction and hence exploitation of environmental constraints for task accomplishment and knowledge acquisition

The Digital Transformation of Labor Anthony Larsson,Robin Teigland,2019-11-11 Through a series of studies the overarching aim of this book is to investigate if and how the digitalization digital transformation process causes or may cause the autonomy of various labor functions and its impact in creating or stymieing various job opportunities on the labor market This book also seeks to illuminate what actors groups are mostly benefited by the digitalization digital transformation and which actors groups that are put at risk by it This book takes its point of departure from a 2016 OECD report that contends that the impact digitalization has on the future of labor is ambiguous as on the one hand it is suggested that technological change is labor saving but on the other hand it is suggested that digital technologies have not created new jobs on a scale that it replaces old jobs Another 2018 OECD report indicated that digitalization and automation as such does not pose a real risk of destroying any significant number of jobs for the foreseeable future although tasks would by and large change significantly This would affects welfare as most of its revenue stems from taxation and particularly so from the taxation on labor directly or indirectly For this reason this book will set out to explore how the future technological and societal advancements impact labor conditions The book seeks to provide an innovative enriching and controversial take on how various aspects of the labor market can be and are affected the ongoing digitalization trend in a way that is not covered by extant literature As such this book intends to cater to a wider readership from a general audience and students to specialized professionals and academics wanting to gain a deeper understanding of the possible future developments of the labor market
