Hydroponics For Beginners Essential Hydroponic Gardening Guide:

Hydroponic Garden Secrets Tyler Water, 2020-12-04 B W EDITION Do you want to discover a scientific technique for building your own hydroponic garden Then keep reading Hydroponics is a means of growing plants without soil It makes use of nutrient rich water or a nutrient solution as well as techniques that allow the plant to grow You can also use sand or gravel with added nutrients In this chapter you are going to learn the history of the growing art that we call hydroponics You will also learn about some of its practical uses throughout history Traditionally the soil is used to grow plants It was thought that soil was necessary since plants started out in the earth with nutrient rich soils like the strawberry plants that were first grown in the wild before being cultivated for gardens At some point in history it was discovered that the soil was not necessary for the growing process Rather the role of soil is to act as a reservoir to hold the nutrients that a plant needs in order to grow Crops grown hydroponically according to studies grow faster and healthier and are better than crops grown on soil this is because they would not have to go through a lot of disadvantages that the soil may present such as situations of a break out of a soil borne disease in the area the struggle to have to push its way through the soil during germination the attack from organism and pests that live in the soil And of course the plants in hydroponic systems do not have to hustle for nutrients and water because this is basically what they are planted in in hydroponic systems water based mineral nutrient solutions Hydroponics also helps you save water which sounds a bit strange when you think of water is essential for this process Usually it s every alternate day so that the soil soaks up the water and is transported to the roots That sounds fine doesn t it But that s only a portion of the big picture Some of the water is bound to seep out of the container some of it evaporates and a portion of it seeps further into the soil beyond the plant s roots So in practice the plant essentially only uses up a small portion of the water Hydroponics uses a simple recirculating mechanism that ensures that the water is fully soaked up by the roots It means that the portion of water that isn t absorbed by the plant is directly sent to the reservoir The same water from the reservoir is later pumped up to the plants Since the reservoir is shut tight there is no chance for the water to evaporate and it certainly will not seep out of the bottom of the container You can save around 80% of the water by switching to hydroponics instead of using regular soil gardening This book covers the following topics Equipment Hydroponic Growing System Plant necessities Best plant for hydroponics Pest and disease Choosing the right site for your garden Maintenance of your hydroponic garden And Much More Do not get scared hydroponic gardening is not as complicated tricky and demanding as your mind is about to convince you that it is on the contrary it is very simple And this is what this book is about to enlighten you and get you started on having your own hydroponic garden Ready to get started Click Buy Now

HISTORY OF HYDROPONICS

Hydroponics basically means working water hydro means water and ponos means labor Many different civilizations have utilized hydroponic growing techniques throughout history As noted in Hydroponic Food Production Fifth Edition Woodbridge Press 1997 page 23 by Howard M Resh The hanging gardens of Babylon the floating gardens of the Aztecs of Mexico and those of the Chinese are examples of Hydroponic culture Egyptian hieroglyphic records dating back several hundred years B C describe the growing of plants in water Hydroponics is hardly a new method of growing plants However giant strides have been made over the years in this innovative area of agriculture Throughout the last century scientists and horticulturists experimented with different methods of hydroponics One of the potential applications of hydroponics that drove research was for growing fresh produce in nonarable areas of the world It is a simple fact that some people cannot grow in the soil in their area if there is even any soil at all This application of hydroponics was tested during World War II Troops stationed on nonarable islands in the Pacific were supplied with fresh produce grown in locally established hydroponic systems Later in the century hydroponics was integrated into the space program As NASA considered the practicalities of locating a society on another planet or the Earth's moon hydroponics easily fit into their sustainability plans This research is ongoing But by the 1970s it wasn't just scientists and analysts who were involved in hydroponics Traditional farmers and eager hobbyists began to be attracted to the virtues of hydroponic growing A few of the positive aspects of hydroponics include The ability to produce higher yields than traditional soil based agriculture Allowing food to be grown and consumed in areas of the world that cannot support crops in the soil Eliminating the need for massive pesticide use considering most pests live in the soil effectively making our air water soil and food cleaner Commercial growers are flocking to hydroponics like never before The ideals surrounding these growing techniques touch on subjects that most people care about such as helping end world hunger and making the world cleaner In addition to the extensive research that is going on everyday people from all over the world have been building or purchasing their own systems to grow great tasting fresh food for their family and friends Educators are realizing the amazing applications that hydroponics can have in the classroom And ambitious individuals are striving to make their dreams come true by making their living in their backyard greenhouse selling their produce to local markets and restaurants

Are you looking for an exclusive guide on how to grow plants in the best way possible Then keep reading Your Customers Never Stop to Use this Awesome Guide to Hydroponic The word hydroponic means working with water In simple terms it is the science of growing plants without dirt or soil as a medium Plants need nutrients to grow and to anchor them for support Plants usually get these from the soil in traditional gardening However in hydroponics you can give plants exactly what they need in the particular amount needed and when they need it You also need to provide the plants with extra support but it is quite easy Enriched water can easily provide all the nutrients required by the plants with very little extra work In fact this is

easier to do in water than in soil The plants receive pH adjusted nutrient solutions The roots absorb nutrients more efficiently in a highly soluble form It takes very little effort for the roots to absorb the needed nutrients in order to grow Even if the soil is organic and rich in nutrients the plant will expend too much energy searching for and extracting those nutrients This book covers the following topics How to build your own hydroponic system Best plants for hydroponic gardening and nutrition Choosing plants Growing medium nutrients lighting in hydroponics Hydroponics vs soil gardening Maintenance of your hydroponic garden System maintenance Potential problem and how to overcome them Tips and tricks to grow healthy herbs and vegetables Starting hydroponic business Basic components of the system Tools you will need Hydroponic systems equipment Choosing the best lighting medium for your hydroponic plants The world of hydroponics And much more Hydroponic plants grow easily and produce more because the force it takes for the roots to wheedle out nutrients in the soil goes instead on vegetative growth and bearing fruit or flowers Thus it s more effective as a means of production Because the growing medium is inert you can control the nutrients that the plant receives by adjusting the pH levels and strength of the nutrient solutions You also manage the feeding and watering cycles With technology the potential to have a high tech hydro system is not impossible All aspects of this type of gardening are therefore easy automated and controlled The only limit is your budget and your imagination With hydroponics people can be confident that food that they will always have food available and that the crops will be easy to produce Crops can be cultivated even in places with non arable land Hydroponics ensures that the plants or crops get the needed nutrients to grow well Are you ready to know more Now buy your copy
