Composite Materials deals with the prediction of the deformation behavior and strength of composite materials. The book discusses the basic concepts in micromechanics, definition of effective moduli and the influence of the number of fibers through the thickness within a single composite layer on the effective properties. The text also describes the exact moduli of anisotropic laminates, the elastic behavior of composites and the viscoelastic behavior and analysis of composite materials. The elastoplastic behavior of composites and the application of statistical theories for the determination of thermal, electrical and magnetic properties of heterogeneous materials are also considered. The book further tackles the finite deformations of ideal fiber reinforced composites, wave propagation and vibrations in directionally reinforced composites and the phenomenological anisotropic failure criterion. The text also looks into the photoelastic investigation of composites. Civil engineers, mechanical engineers, aerospace engineers and people involved in the study of non-metallic materials will find the book invaluable.

Mechanics of Composite Materials: Recent Advances covers the proceedings of the International Union of Theoretical and Applied Mechanics (IUTAM) Symposium on Mechanics of Composite Materials. The book reviews papers that emphasize fundamental mechanics developments and unresolved problems of the field. The text covers topics such as mechanical properties of composite materials, influence of microstructure on the thermoplastics and transport properties of particulate and short fiber composites and further applications of the systematic theory of materials with disordered constitution. The selection also explains the curved thermal crack growth in the interface of a unidirectional carbon/aluminum composite and energy release rates of various microcracks in short fiber composites. The book will be of great interest to researchers and professionals whose line of work requires the understanding of the mechanics of composite materials.
