In a letter to ShengZhao Long from October 22nd 1993 XueSen Qian wrote "You have created a very important modern science subject and technology in China. MMESE primarily focuses on the relationship between Man, Machine and Environment, studying the optimum combination of man, machine, environment systems. In this system, Man refers to working people as the subject in the workplace, e.g. operators, decision makers. Machine is the general name for any object controlled by Man, including tools, machinery, computers, systems and technologies, and Environment describes the specific working conditions under which Man and Machine interact, e.g. temperature, noise, vibration, hazardous gases, etc. The three goals of optimization are to ensure safety, efficiency and economy. These proceedings are an academic showcase of the best papers selected from more than 400 submissions, introducing readers to the top research topics and the latest developmental trends in the theory and application of MMESE. These proceedings are interdisciplinary studies on the concepts and methods of physiology, psychology, system engineering, computer science, environment science, management, education and other related disciplines. Hybrid Solutions for the Modelling of Complex Environmental Systems Christian E. Vincenot, Stefano Mazzoleni, Lael Parrott, 2017-01-11 Systems studied in environmental science due to their structure and the heterogeneity of the entities composing them often exhibit complex dynamics that can only be captured by hybrid modeling approaches While several concurrent definitions of hybrid modeling can be found in the literature it is defined here broadly as the approach consisting in coupling existing modelling paradigms to achieve a more accurate or efficient representation of systems The need for hybrid models generally arises from the necessity to overcome the limitation of a single modeling technique in terms of structural flexibility capabilities or computational efficiency This book brings together experts in the field of hybrid modelling to demonstrate how this approach can address the challenge of representing the complexity of natural systems Chapters cover applied examples as well as modeling methodology
