Genetics Joins Evolutionary Theory

Gregor Mendel's original ideas on how hereditary information is passed:

- 1. Hereditary information that comes from parents are controlled by genes and that these genes have a hereditary basis in cells. The hereditary information is an individual's genotype. Genotype is the genetic information that is passed on to offspring.
- 2. Genes are passed on from one generation to the next. Genotype is a population that is a group of genes, which are passed on.
- 3. **Allele frequency**: is the number of alleles in a population. Allele frequency is the number of alleles in a population. Allele frequency is the number of alleles in a population. Allele frequency is the number of alleles in a population.

Examples of Genetic Variation Hereditary variation is passed on from one generation to the next. Genes are passed on from one generation to the next. Genes are passed on from one generation to the next.

- 1. Alleles are passed on from one generation to the next. Alleles are passed on from one generation to the next. Alleles are passed on from one generation to the next.

Single Gene and Polygenic Traits Hereditary variation is passed on from one generation to the next. Genes are passed on from one generation to the next. Genes are passed on from one generation to the next.

- 1. **Single gene trait** is controlled by one gene. An example is the trait of height. Height is controlled by one gene.
- 2. **Polygenic trait** is controlled by more than one gene. An example is the trait of height. Height is controlled by more than one gene.

Replacing Darwin Nathaniel T Jeanson, 2017-09-01 If Darwin were to examine the evidence today using modern science would his conclusions be the same Charles Darwin s *On the Origin of Species* published over 150 years ago is considered one of history s most influential books and continues to serve as the foundation of thought for evolutionary biology Since Darwin s time however new fields of science have emerged that simply give us better answers to the question of origins With a Ph D in cell and developmental biology from Harvard University Dr Nathaniel Jeanson is uniquely qualified to investigate what genetics reveal about origins

The Origins Puzzle Comes Together If the science surrounding origins were a puzzle Darwin would have had fewer than 15% of the pieces to work with when he developed his theory of evolution We now have a much greater percentage of the pieces because of modern scientific research As Dr Jeanson puts the new pieces together a whole new picture emerges giving us a testable predictive model to explain the origin of species A New Scientific Revolution Begins Darwin s theory of evolution may be one of science s sacred cows but genetics research is proving it wrong Changing an entrenched narrative even if it s wrong is no easy task Replacing Darwin asks you to consider the possibility that based on genetics research our origins are more easily understood in the context of In the beginning God with the timeline found in the biblical narrative of Genesis There is a better answer to the origins debate than what we have been led to believe Let the revolution begin About the Author Dr Nathaniel Jeanson is a scientist and a scholar trained in one of the most prestigious universities in the world He earned his B S in Molecular Biology and Bioinformatics from the University of Wisconsin Parkside and his PhD in Cell and Developmental Biology from Harvard University As an undergraduate he researched the molecular control of photosynthesis and his graduate work involved investigating the molecular and physiological control of adult blood stem cells His findings have been presented at regional and national conferences and have been published in peer reviewed journals such as Blood Nature and Cell Since 2009 he has been actively researching the origin of species both at the Institute for Creation Research and at Answers in Genesis
