Statistics Today Claus Weihs, Walter Krämer, Sarah Buschfeld, 2024-06-26. This book offers a broad selection of statistical applications to everyday situations illustrating how exciting and diverse statistical analysis can be. It covers a wide variety of topics including offering hearing impaired people the option to enjoy music, extracting meaningful quantitative data from texts, and modeling flood disasters to help get a better grip on them. Most of the examples are not typically found in textbooks but directly relate to real life problems encountered by the average person, including topics relevant for sustainable development. Technical jargon and formalism have been avoided as much as possible, and a detailed statistical background is not assumed of the reader, making the book accessible to anyone interested in current research in statistical applications. Providing an unobscured look at a thoroughly fascinating science, it will help students to develop enthusiasm for statistical issues and methods and may even inspire ideas for their own projects. **Resources in Education**, 1977

Scott Foresman-Addison Wesley Mathematics, 2008 *International Perspectives on the Teaching and Learning of Geometry in Secondary Schools* Patricio Herbst, Ui Hock Cheah, Philippe R. Richard, Keith Jones, 2018-04-27. This book presents current perspectives on theoretical and empirical issues related to the teaching and learning of geometry at secondary schools. It contains chapters contributing to three main areas: A first set of chapters examines mathematical epistemological and curricular perspectives; A second set of chapters presents studies on geometry instruction and teacher knowledge; and a third set of chapters offers studies on geometry thinking and learning. Specific research topics addressed also include teaching practice, learning trajectories, learning difficulties, technological resources, instructional design, assessments, textbook analyses, and teacher education in geometry. Geometry remains an essential and critical topic in school mathematics. As they learn geometry, students develop essential mathematical thinking and visualization skills and learn a language that helps them relate to and interact with the physical world. Geometry has traditionally been included as a subject of study in secondary mathematics curricula, but it has also featured as a resource in out of school problem solving and has been connected to various human activities such as sports, games, and artwork.

Furthermore geometry often plays a role in teacher preparation undergraduate mathematics and at the workplace New technologies including dynamic geometry software computer assisted design software and geometric positioning systems have provided more resources for teachers to design environments and tasks in which students can learn and use geometry In this context research on the teaching and learning of geometry will continue to be a key element on the research agendas of mathematics educators as researchers continue to look for ways to enhance student learning and to understand student thinking and teachers decision making
