Introduction

The purpose of this pack is to introduce the reader to the main features of the research process. The type of information which informs decisions about how to undertake a research project is described and supported by examples from primary care and other health services research. The pack is intended for health care professionals with little or no previous research knowledge.

If a project is worth doing then it is probably worth convincing an interested organisation to fund it. There are no guaranteed ways of securing funding but there are steps you can take to maximise your chances of success. Applying for research funding might sound like the starting point of the research process but applicants need to demonstrate a clear idea of the entire process of a research project, right up until what will happen at the end of the process (for example modes of dissemination and practical implementation of results), in order to convince a funding body that their money will be spent wisely.

The pack is split into two sections. The first section 'Getting Started', takes the reader through a whistle stop tour of the research process and provides advice on how to get beyond a vague research idea to something that (with expert help, hard work and lots of enthusiasm) has the potential to generate new insights into health care issues and concerns. The second section, 'Getting Funded', looks at the context of research funding in the UK and encourages the reader to put their own research ideas to the acid test of a funding application.

As many of the terms used may be either new or used in a context unfamiliar to readers, a glossary of terms is provided at the back of the pack. We have tried to make the exercises of practical use to the reader. Some of the exercises test the reader's understanding of the concepts contained within the pack, while others give the reader the opportunity to work with their research ideas about their own areas of interest.

The other resource packs in this series provide more detail on specific aspects of the research process. The reader is pointed to specific resource packs at various points within this pack. The full list of packs produced by The NIHR RDS EM / YH can be found at:

An Introduction to Game Studies Frans Mäyrä, 2008-02-18 An Introduction to Game Studies is the first introductory textbook for students of game studies. It provides a conceptual overview of the cultural, social and economic significance of computer and video games and traces the history of game culture and the emergence of game studies as a field of research. Key concepts and theories are illustrated with discussion of games taken from different historical phases of game culture. Progressing from the simple yet engaging gameplay of Pong and text-based adventure games to the complex virtual worlds of contemporary online games, the book guides students towards analytical appreciation and critical engagement with gaming and game studies. Students will learn to understand and analyse different aspects of phenomena we recognise as game and play. Identify the key developments in digital game design through discussion of action in games of the 1970s, fiction and adventure in games of the 1980s, three dimensionality in games of the 1990s and social aspects of gameplay in contemporary online games. Understand games as dynamic systems of meaning-making. Interpret the context of games as culture and subculture. Analyse the relationship between technology and interactivity and between game and reality. Situate games within the context of digital culture and the information society. With further reading suggestions, images, exercises, online resources and a whole chapter devoted to preparing students to do their own game studies project, *An Introduction to Game Studies* is the complete toolkit for all students pursuing the study of games. The companion website at www.sagepub.co.uk/mayra contains slides and assignments that are suitable for self-study as well as for classroom use. Writing a Research Paper in Political Science Lisa A. Baglione, 2018-12-31 Even students capable of writing excellent essays still find their first major political science research paper an intimidating experience. Crafting the right research question, finding good sources, properly summarizing them, operationalizing concepts and designing good tests for their hypotheses, presenting and analyzing quantitative as well as qualitative data are all tough going without a great deal of guidance and encouragement. *Writing a Research Paper in Political Science* breaks down the research paper into its constituent parts and shows students what they need to do at each stage to successfully complete each component until the paper is finished. Practical summaries, recipes for success, worksheets, exercises and a series of handy checklists make this a must-have supplement for any writing-intensive political science course. New to the Fourth Edition, a non-causal research paper woven throughout the text offers explicit advice to guide students through the research and writing process. Updated and more detailed discussions of plagiarism, paraphrases, drop-ins and transcripts help to prevent students from misusing sources in a constantly changing digital age. A more detailed discussion of fake news and disinformation shows students how
