Abstract—The purpose of this study was to determine the effect of a 10-week training program on the heart rate (HR) and energy expenditure (EE) of sedentary, middle-aged women. The subjects were 10 women, 40 to 50 years of age, who were sedentary and had no cardiovascular or pulmonary disease. The subjects were randomly assigned to a 10-week training program or a control group. The training program consisted of three sessions per week of 30 minutes of low-impact aerobics. The control group consisted of three sessions per week of 30 minutes of low-impact aerobics. The subjects were monitored for HR and EE during the training program and control period. The results showed that the training program had a significant effect on HR and EE. The HR of the training group decreased significantly from 140 to 120 beats per minute (p < 0.05). The EE of the training group increased significantly from 1,200 to 1,400 kcal per week (p < 0.05). The control group showed no significant change in HR or EE. The results of this study suggest that a 10-week training program can improve the cardiovascular fitness of sedentary, middle-aged women.
