

THE HUMAN BODY: AN ORIENTATION

Most of us think of anatomy as bones and muscles, and physiology as how those structures function. But, actually, anatomy has developed a much wider perspective on all structures, from the cellular level to the level of the whole body. And physiology has developed a much wider perspective on all structures, from the cellular level to the level of the whole body. And physiology has developed a much wider perspective on all structures, from the cellular level to the level of the whole body.

The study of the human body is divided into two main branches: anatomy and physiology. Anatomy is the study of the structure of the body, and physiology is the study of the function of the body. The study of anatomy is divided into two main branches: gross anatomy and microscopic anatomy. Gross anatomy is the study of the structures of the body that can be seen with the naked eye, and microscopic anatomy is the study of the structures of the body that can only be seen with a microscope.
