

Inscribed Angle Theorem

States that an inscribed angle on a circle is half the measure of the central angle that subtends or forms the same arc

If $\angle ACB$ is the inscribed angle and $\angle AOB$ is the central angle of the given circle, then

$$\angle ACB = \frac{1}{2}\angle AOB \text{ or } 2\angle ACB = \angle AOB$$

mathematical discoveries were related to their explorations Although the problems were based in geometry their resolutions were not and had to wait until the nineteenth century when mathematicians had developed the theory of real and complex numbers analytic geometry algebra and calculus Pierre Wantzel a little known mathematician and Ferdinand von Lindemann through his work on pi finally determined the problems were impossible to solve Along the way Richeson provides entertaining anecdotes connected to the problems such as how the Indiana state legislature passed a bill setting an incorrect value for pi and how Leonardo da Vinci made elegant contributions in his own study of these problems Taking readers from the classical period to the present *Tales of Impossibility* chronicles how four unsolvable problems have captivated mathematical thinking for centuries
