Chromatography of Environmental Hazards Lawrence Fishbein,1982 *Cancer Research* ,2000 Journal of Cell Science ,2002 *Angiogenesis Protocols* J. Clifford Murray,2008-02-02 In the last few years we have been deluged with information on ang genesis Scientists and the public at large are exposed daily to this new science not just in specialist journals and texts but in the tabloid press where popular articles refer to angiogenic therapies as magic bullets and miracle cures for cancer arthritis retinopathies heart disease and circulatory problems Is there no ill this approach will not cure The fact that so much time effort and resource have been and continue to be dedicated to this new science is clear testament to its importance Yet many fundamental aspects of angiogenesis remain poorly und stood in particular cues that activate the process This fact has to some extent been masked behind a surfeit of fine detail we can t see the wood for the trees Most studies of angiogenesis identify single links in a long chain of events Furthermore each study is itself hampered by the limitations of the biological end point chosen For instance though endothelial proliferation may well be necessary for

angiogenesis it is not sufficient Therefore measuring endothelial proliferation in response to a novel growth factor and on the basis of this obs vation stating that the factor is angiogenic is unsound logic It is important that researchers in this field and perhaps more importantly those experimenting at its periphery recognize the limitations of their chosen biological end points
