science just to name a few and adapts the relevant techniques and insights to address relevant but disparate social biological technological questions We are now in an era of big biological data supported by cost effective high throughput genomic transcriptomic proteomic metabolomic data collection techniques that allow one to take snapshots of the cells molecular profiles in a systematic fashion Moreover recently also phenotypic data data on diseases symptoms patients etc are being collected at nation wide level thus giving us another source of highly related causal big data This wealth of data is usually modeled as networks aka binary relations graphs or webs of interactions including protein protein metabolic signaling and transcription regulatory interactions The network model is a key view point leading to the uncovering of mesoscale phenomena thus providing an essential bridge between the observable phenotypes and omics underlying mechanisms Moreover network analysis is a powerful hypothesis generation tool guiding the scientific cycle of data gathering data interpretation hypothesis generation and hypothesis testing A major challenge in contemporary research is the synthesis of deep insights coming from network science with the wealth of data often noisy contradictory incomplete and difficult to replicate so to answer meaningful biological questions in a quantifiable way using static and dynamic properties of biological networks

Why Nationalism Yael Tamir,2020-11-03 Why nationalism is a permanent political force and how it can be harnessed once again for liberal ends Populist politicians exploit nationalism for authoritarian chauvinistic racist and xenophobic purposes reinforcing the view that it is fundamentally reactionary and antidemocratic The author makes a passionate argument for a very different kind of nationalism one that revives its participatory creative and egalitarian virtues answers many of the problems caused by neoliberalism and hyperglobalism and is essential to democracy at its best
