Isogeometric Analysis For Engineers Via Matlab John Edward Akin,2024-11-12 This unique compendium approaches the relatively new Isogeometric Analysis IGA methods at senior undergraduates level in engineering or applied mathematics It describes the differences between the well established Finite Element Analysis FEA methods and why they are being replaced or enhanced by the latest developments in IGA The book begins with summaries of the concepts of B splines NURBS and knot vectors which define them as exact representations of the geometry and as powerful analysis functions having higher continuity than the FEA use of Lagrange polynomials The useful reference text includes Appendices with Matlab scripts for creating B spline basis functions topics in computer aided geometric design CAGD from which IGA arose and matrix operations common to IGA and FEA It also informs FEA users of the enhancements offered by IGA

destructive testing aimed at monitoring structural identification and diagnostics is of strategic importance in many branches of civil and mechanical engineering This type of tests is widely practiced and directly affects topical issues regarding the design of new buildings and the repair and monitoring of existing ones The load bearing capacity of a structure can now be evaluated using well established mechanical modelling methods aided by computing facilities of great capability However to ensure reliable results models must be calibrated with accurate information on the characteristics of materials and structural components To this end non destructive techniques are a useful tool from several points of view Particularly by measuring structural response they provide guidance on the validation of structural descriptions or of the mathematical models of material behaviour Diagnostic engineering is a crucial area for the application of non destructive testing methods Repeated tests over time can indicate the emergence of possible damage occurring during the structure's lifetime and provide quantitative estimates of the level of residual safety

Fourier Transform Salih Salih, 2012-05-23 The field of material

analysis has seen explosive growth during the past decades Almost all the textbooks on materials analysis have a section devoted to the Fourier transform theory For this reason the book focuses on the material analysis based on Fourier transform theory The book chapters are related to FTIR and the other methods used for analyzing different types of materials It is hoped that this book will provide the background reference and incentive to encourage further research and results in this area as well as provide tools for practical applications It provides an applications oriented approach to materials analysis written primarily for physicist Chemists Agriculturalists Electrical Engineers Mechanical Engineers Signal Processing Engineers and the Academic Researchers and for the Graduate Students who will also find it useful as a reference for their research activities
