Wastewater Treatment Technologies Mritunjay Chaubey,2021-02-15 WASTEWATER TREATMENT TECHNOLOGIES Globally the practice of wastewater treatment before discharge is inconsistent The United Nations World Water Development

Report 2017 estimated that globally over 80% of all wastewater is discharged without treatment. The discharge of untreated or inadequately treated wastewater into the environment results in the pollution of surface water, soil, and groundwater. According to the WHO, water-related diseases kill around 2.2 million people globally each year, mostly children in developing countries. We need to understand that wastewater is not merely a water management issue; it affects the environment, all living beings, and can have direct impacts on economies. The establishment of UN Sustainable Development Goal 6, Clean Water and Sanitation, which aims to ensure availability and sustainable management of water and sanitation for all, reflects the increased attention on water and wastewater treatment issues in the global political agenda. Water reuse is one of the most efficient, cost-effective, and eco-friendly ways to ensure water resilience. Embedding sustainability into wastewater treatment is the best opportunity for industries to drive smarter innovation and efficient wastewater treatment. The modern concept of industrial wastewater treatment is moving away from conventional design. Wastewater treatment technology is moving towards extreme modular design using smart and sustainable technology. This book is intended as a reference book for all wastewater treatment professionals and operational personnel. It may also be used as a textbook on graduate and postgraduate courses in the field of wastewater treatment and management. The book takes a holistic view of the practical problems faced by industry and provides multiple needs-based solutions to tackle wastewater treatment and management issues. It elaborates on selection of technology and their design criteria for different types of wastewater. This will enable engineering students and professionals to expand their horizons in the fields of wastewater treatment and management.

Water Conservation Manoj Jha, 2011-12-09 Water is an essential and basic human need for urban, industrial, and agricultural use. While an abundance of fresh water resources is available, its uneven distribution around the globe creates challenges for sustainable use of this resource. Water conservation refers to an efficient and optimal use as well as protection of valuable water resources, and this book focuses on some commonly used tools and techniques such as rainwater harvesting, water reuse, and recycling, cooling water recycling, irrigation techniques such as drip irrigation, agricultural management practices, groundwater management, and water conservation incentives.

Shah,2023-04-04 The book highlights the importance of newly developed bioremediation technologies in industrial waste treatment to clean up the environment from pollution caused by human activities It assesses the potential application of several existing bioremediation techniques and introduces new emerging and application based technologies This technology includes several techniques such as bio stimulation bio generation bioaccumulation biosorption physical correction and rhyming emission This book describes the limitations and challenges associated with some generally accepted bioremediation strategies and evaluate the possible applications of these corrective strategies to eliminate toxic pollutants from the environment through integrated Technologies in Industrial wastewater treatment

Development of Novel Bioelectrochemical Membrane Separation Technologies for Wastewater Treatment and Resource Recovery Yunkun Wang,2020-03-30 The most commonly used biological wastewater treatment technologies still have serious technical economical and sustainability related limitations due to their high energy requirements poor effluent quality and lack of energy and resource recovery processes In this thesis novel electrochemical membrane bioreactors EMBRs which take advantage of membrane separation and bioelectrochemical techniques are developed for wastewater treatment and the simultaneous recovery of energy and resources Above all this innovative system holds great promise for the efficient wastewater treatment and energy recovery It can potentially recover net energy from wastewater while at the same time harvesting high quality effluent The book also provides a proof of concept study showing that electrochemical control might offer a promising in situ means of suppressing membrane fouling Lastly by integrating electrodialysis into EMBRs phosphate separation and recovery are achieved Hence these new EMBR techniques provide viable alternatives for sustainable wastewater treatment and resource recovery

Organizational Engineering in Industry 4.0 David De la Fuente,Raúl Pino,Borja Ponte,Rafael Rosillo,2021-05-15 The book includes the latest research advances and cutting edge analyses of real case studies in the disciplines of Industrial Engineering and Operations Management from

diverse international contexts This work presents a revised version of the best papers presented at the XIII International Conference on Industrial Engineering and Industrial Management promoted by ADINGOR Asociaci n para el Desarrollo de la Ingenier a de Organizaci n which took place at the Polytechnic School of Engineering of Gij n University of Oviedo Asturias Spain from July 11th to 12th 2019 Biological Wastewater Treatment: Principles, Modeling and Design Guang-Hao Chen, Mark C.M. van Loosdrecht, G.A. Ekama, Damir Brdjanovic, 2020-07-15 The first edition of this book was published in 2008 and it went on to become IWA Publishing s bestseller Clearly there was a need for it because over the twenty years prior to 2008 the knowledge and understanding of wastewater treatment had advanced extensively and moved away from empirically based approaches to a fundamental first principles approach based on chemistry microbiology physical and bioprocess engineering mathematics and modelling However the quantity complexity and diversity of these new developments was overwhelming for young water professionals particularly in developing countries without readily available access to advanced level tertiary education courses in wastewater treatment For a whole new generation of young scientists and engineers entering the wastewater treatment profession this book assembled and integrated the postgraduate course material of a dozen or so professors from research groups around the world who have made significant contributions to the advances in wastewater treatment This material had matured to the degree that it had been codified into mathematical models for simulation with computers The first edition of the book offered that upon completion of an in depth study of its contents the modern approach of modelling and simulation in wastewater treatment plant design and operation could be embraced with deeper insight advanced knowledge and greater confidence be it activated sludge biological nitrogen and phosphorus removal secondary settling tanks or biofilm systems However the advances and developments in wastewater treatment have accelerated over the past 12 years since publication of the first edition While all the chapters of the first edition have been updated to accommodate these advances and developments some such as granular sludge membrane bioreactors sulphur conversion based bioprocesses and biofilm reactors which were new in 2008 have matured into new industry approaches and are also now included in this second edition The target readership of this second edition remains the young water professionals who will still be active in the field of protecting our precious water resources long after the aging professors who are leading some of these advances have retired The authors all still active in the field are aware that cleaning dirty water has become more complex but that it is even more urgent now than 12 years ago and offer this second edition to help the young water professionals engage with the scientific and bioprocess engineering principles of wastewater treatment science and technology with deeper insight advanced knowledge and greater confidence built on stronger competence
