The Real Case for Driverless Mobility Alain L. Kornhauser, Michael L. Sena, 2024-01-24 The Real Case for Driverless Mobility Putting Driverless Vehicles to Use for Those Who Really Need a Ride explores solutions for providing mobility for the unserved underserved including those who cannot drive themselves afford transport alternatives or who live in areas where neither public nor private transport is offered The book synthesizes the career long activities of the authors and the Princeton SmartDrivingCars Summits and assesses whether cars without drivers can deliver an affordable and more effective alternative to mass transit and taxis A high percentage of the residents in many U S cities are poor and the jobs that remain are often not easily reached by public transit systems which struggle to deliver a minimum level of service with their limited budgets The SDC Summits were initiated in 2017 by Alain Kornhauser to attempt to address this problem This book presents the problem and the proposed solution in a form that can be used by a wide audience and help build a constituency both for the proof of concept and for an eventual implementation in many cities and towns in North America and other parts of the world Professionals investors researchers and students alike will find this book a valuable exploration of how driverless technology can be applied to personal transport that can be used by a large sub group of the population who are not currently served by automobile transport and are poorly served by public transport solutions Takes a perspective from the demand side focused on the have nots and on assessing and designing the technology to start there and grow Looks at how to start small achieve success and evolve to scale with an emphasis on affordability Discusses automated vehicles from a multidisciplinary perspective with each chapter touching on a unique issue related to AVs The Chartered Mechanical Engineer, *Digital Design and Computer Architecture* David Harris, Sarah Harris, 2010-07-26 Digital Design and Computer Architecture is designed for courses that combine digital logic design with computer organization architecture or that teach these subjects as a two course sequence Digital Design and Computer Architecture begins with a modern approach by rigorously covering the fundamentals of digital logic design and then introducing Hardware Description Languages HDLs Featuring examples of the two most widely used HDLs VHDL and Verilog the first half of the text prepares the reader for what follows in the second the design of a MIPS Processor By the end of Digital Design and Computer Architecture readers will be able to build their own microprocessor and will have a top to bottom understanding of how it works even if they have

no formal background in design or architecture beyond an introductory class David Harris and Sarah Harris combine an engaging and humorous writing style with an updated and hands on approach to digital design Unique presentation of digital logic design from the perspective of computer architecture using a real instruction set MIPS Side by side examples of the two most prominent Hardware Design Languages VHDL and Verilog illustrate and compare the ways the each can be used in the design of digital systems Worked examples conclude each section to enhance the reader s understanding and retention of the material
